FOREWORD

The Agriculture Sector is the backbone of Kenya's economy and the source of livelihood for majority of the rural population. The sector contributes about 26 percent of the country's GDP and employs about 75 percent of the population. The sector is a major source of revenue with agricultural produce exports accounting for nearly two thirds of total domestic export. Supporting this sector therefore leads to securing most livelihoods of the Kenyans people.

Owing to the importance of agriculture in the economy, it is paramount to have accurate, reliable and timely data for informed decision making and proper planning. This "Economic Review of Agriculture" publication is the 9th edition since 2006 when it was re-introduced. The publication has become a crucial reference point for time services data on agriculture. Continuous effort has been made to collect, validate and analyze more data over time. The ministry publication of agricultural statistics has therefore improved further by the inclusion of livestock and fisheries data which has lacked in the previous publications.

Agriculture function has largely been devolved and the sector requires much more coordination and proper monitoring. The Economic Review of Agriculture (ERA) will play a major role in this, since it focus is to consolidate and disseminate necessary information for the growth and development of the agriculture sector. It gives the global perspective in agriculture as well as the national and county performance. This publication will therefore lead to informed decision making by stakeholders in the sector and thus improve the livelihood of Kenyans.

The Ministry supports preparation, printing, and circulation of the ERA publication in recognition of the importance of the annual assessment of the performance of the agriculture sector. This is critical overall performance of the country's economy is positively related to agriculture sector performance. It is expected that the publication will reach various stakeholders in this sector and will guide policy, planning and investment decisions.

I am certain that the Economic Review of Agriculture will be useful to various stakeholders.

Hon. Adan Mohammed, EBS
Cabinet Secretary

PREFACE

The ministry strives to have a food secure and wealthy nation anchored on an innovative, commercially oriented and competitive agricultural sector. The aim is to improve the livelihood of Kenyans and ensures food security through creation of an enabling environment and ensuring sustainable natural resource management. It therefore closely monitors the performance of the agriculture sector which has a major impact on the Kenya's economic performance.

This ninth edition of the Economic Review of Agriculture (ERA) is a continuation of the Ministry's efforts in data consolidation, analysis and dissemination to the various stake holders. It provides domestic macro indicators and international perspective (production and prices) that help in comparative analysis. This edition has given much more focus in analysis of 2013 and 2014 date since the publication was not produced in year 2014 owing to transition challenges in the process of devolution.

This Economic Review of Agriculture (ERA) 2015 edition comprises of nine chapters which mainly present agricultural data analysis and annexes which tabulates very useful production data from all the counties. Chapter one (1) provides basic analysis on aggregate national economic indicators for five years as well as key indicators on performance of Agriculture. Extracts on the world food commodity situation and forecasts by Food and Agriculture Organization (FAO) are analyzed in Chapter two (2) to help on comparative analysis.

Chapter three (3), four (4) and five (5) are the main ones and they give detailed analysis of crops, fisheries and livestock performance respectively. Chapter six (6) presents analysis of inputs for crops, fisheries and livestock. The chapter contains analysis and information regarding inputs such as seed, fertilizers, feed, credits and equipments. A summary of key recent reforms; trends in budget allocation to the ministry; and the ministry's programmes and projects are presented in chapters seven (7), eight (8) and nine (9) respectively.

The ministry is confident that ***Economic Review of Agriculture*** will continue to offer stakeholders and others, access to new information and insights on the agriculture sector which the entire Kenyan economy so much depend on.

ACKNOWLEDGEMENTS

The Central Planning and Project Monitoring Unit (CPPMU) highly recognize and appreciate the support, leadership and guidance offered by the Principal Secretaries of Agriculture, Livestock and Fisheries which made the process of preparing this publication a success. I wish to acknowledge the efforts by the editorial team who worked tirelessly on tight deadlines to deliver the output of the Economic Review of Agriculture (ERA) 2015 edition. The team was comprised of officers drawn from the Ministry's three State Departments.

All the technical directors in the ministry are acknowledged and applauded for giving invaluable technical contributions. The editorial team acknowledges inputs from all data producers including the SAGA's and all those individuals, institutions and stakeholders who continue to provide valuable information to this publication.

Central Planning and Project Monitoring Unit (CPPMU) expresses gratitude to the Kenya Census of Agriculture (KCA) Programme for financing the activities which culminated in the ERA 2015 edition. These include the annual national data validation exercise conducted countrywide, compilation and printing of the publication.

As the team leader of the editorial team I wish to acknowledge the following officers who worked extra hard with commitments to produce the 2015 ERA publication.

Alex Mwaniki	Senior Economist/ Biometrician	State Department of Agriculture
Stephen Njogu	Principal Agricultural Officer	State Department of Agriculture

1.0 OVERVIEW ON ECONOMIC PERFORMANCE

1.1 Overall Economic Performance

The global economy registered a growth of 3.3 percent in the year 2013 and the same rate in 2014. On the other hand, Kenya's economy is estimated to have declined to 5.3 percent in 2014, compared to a growth of 5.7 percent registered in 2013. In 2014, Agriculture Sector recorded a lower growth of 3.5 percent in 2014 compared to the 5.2 percent growth in 2013. The sector amongst others therefore influenced the reduced national economic growth in 2014.

The reduced performance of the agriculture sector was mainly attributable to erratic rains in 2014, with some regions receiving depressed rainfall. This resulted to a decrease in production for some crops as well as pasture regeneration for livestock. Although agriculture did not achieve high growth it was by far the leading sector in percentage contribution to GDP at 27.3 percent followed by manufacturing sector with a share of 10.0 percent. In this regard crops growing, animal production and fishing and aquaculture contributed 19.7 percent, 4.9 percent and 0.8 percent respectively (25.4%); while the balance of 1.9 percent came from forestry and other support activities.

In the 2015 Agriculture Outlook, the global economy is projected to grow at 3.5 percent while the domestic economy would remain relatively the same. Similarly, the performance of the agriculture sector would not significantly change in 2015 as a result of depressed level of rainfall (Economic Survey, 2015).

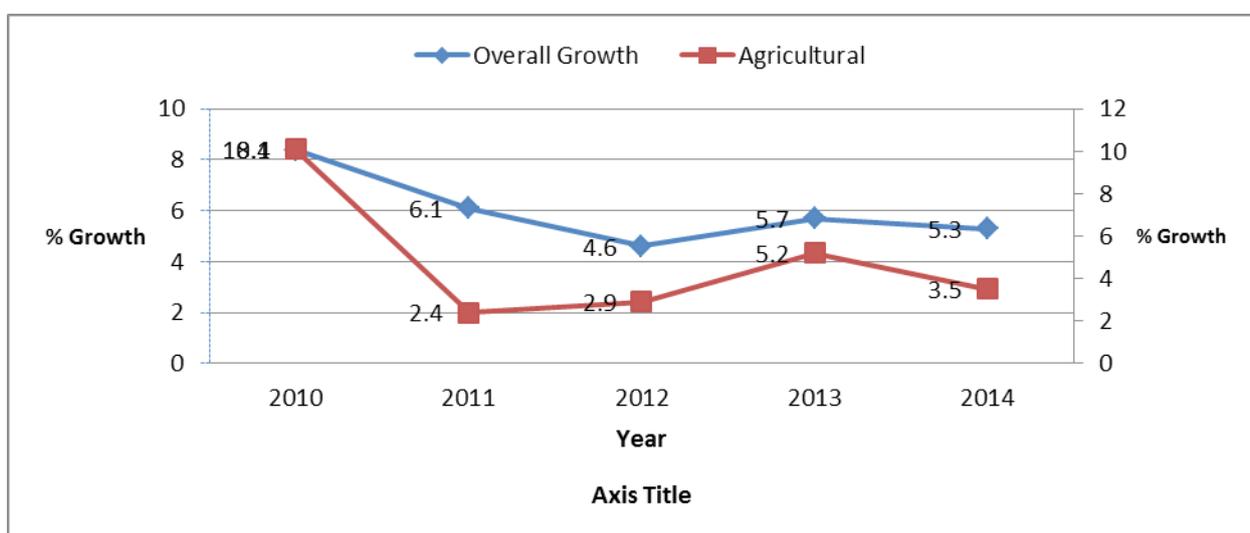

Figure 1.1: Trends in GDP and Agri.GDP, 2010 - 2014

NB: - The new series are based on the re-based GDP.

1.2 Interest Rates

The 91 days Treasury bill rate declined from 9.5 percent in December 2013 to 8.5 percent in December 2014. The commercial banks weighted average lending rate remained relatively high but declined from 17.0 percent in December 2013 to 16.0 percent in December 2014. Over the same period, the deposit rate rose from 6.7 percent to 6.8 percent. The interest rate spread therefore reduced from 10.3 percent in December 2013 to 9.2 percent in December 2014. The interest rate spread in Kenya still remains high as compared to the newly industrializing economies, which stands on average at 6 percent.

1.3 Exchange Rate

The Kenya Shilling exhibited mixed performance against major international and regional currencies during the year 2014. The Kenya shilling held firm against the major trading currencies despite its weakening against the United States Dollar (USD), Sterling pound and the Euro. Performance of the shilling reflected international developments, where the USD continued to strengthen against other major world currencies as a result of rebounding US economy. The Kenya shilling's stability was mainly due to proceeds from successful international sovereign bonds floated by the Government in June 2014 and increased diaspora remittances. A significant decline in the international tourism earnings and a widening trade deficit worked against the Kenya shilling.

1.4 Inflation Rate

Despite the drop in prices of fuel and electricity, inflation rate rose slightly as a result of high food price. Inflation rate maintained its single digit level, rising from 5.7 percent in 2013 to 6.9 percent in 2014. It is projected to ease in 2015 supported by lower prices of oil, electricity and expected favorable weather situation.

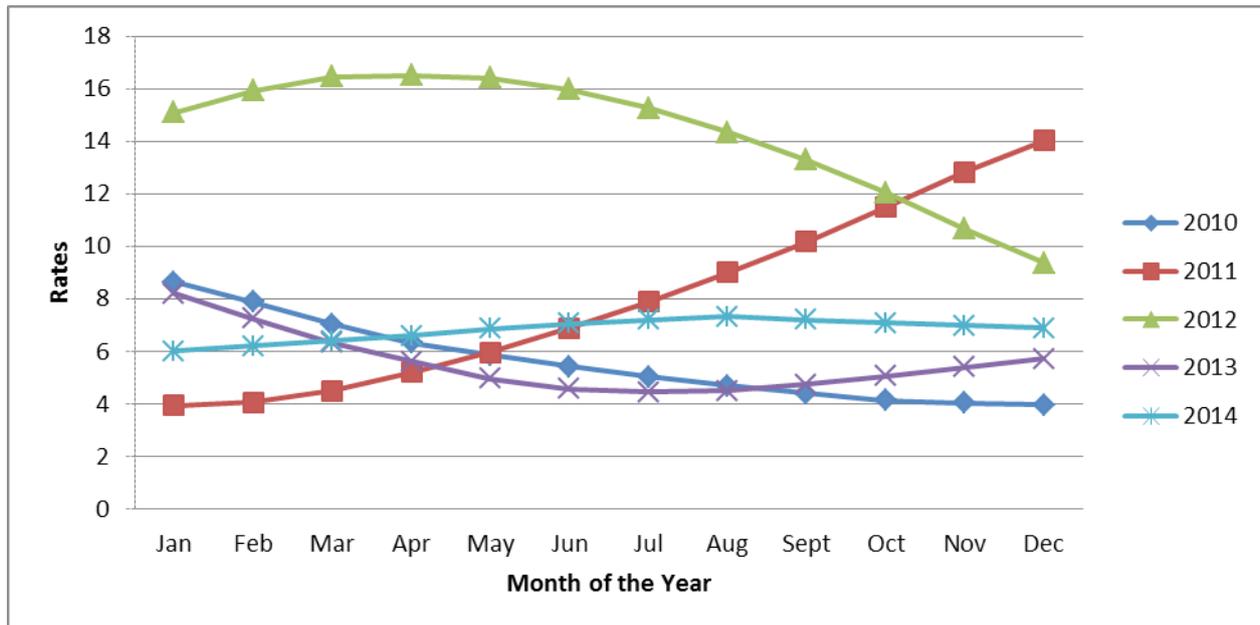

Figure 1.2: Average Inflation Rates

Source: CBK

1.5 Performance of the Agricultural sector

Growing of crops and animal production was negatively affected by the impact of poor long rains (March-May) in some parts of the country, especially in the North Rift with the short rains (October- December) being near normal in most parts of the country. This resulted to reduced maize production in 2014 to 39.0 million bags from 40.7 million bags (90 kg) harvested in 2013. However, there was notable production increases in coffee, tea, cut flowers and fruits, while sugarcane production declined.

The total marketed production increased slightly to Kshs 336.5 billion in 2014 from Kshs 334.8 billion in 2013. Marketing of key cash crops was negatively affected by suppressed external demand and a glut in global supply of tea. Quantity of exported tea increased by 1.0 percent but its price generally remained suppressed due to the increased supply in the international market. On the other hand, the value of coffee exports rose by 22.0 percent, despite a decline of 3.0 percent in export quantities due to improved international prices. The improvement in prices was attributed to high quality beans and increased demand for Kenyan coffee for blending other varieties. Earnings from the export of fresh horticultural crops increased marginally by 1.0 percent from Kshs 83.4 billion in 2013 to Kshs 84.1 billion in 2014.

Milk production decreased by 8.1 percent from 3.7 billion litres in 2013 to 3.4 billion litres in 2014. The formal marketed milk increased from 523.0 Mn litres in 2013 to 541.6 Mn litres in 2014. Beef production increased by 17.2 percent to record 113.5 MT in 2014 from 96.8 MT in 2013.

During the review period, fishing recorded improved performance with fish from fresh water sources being the major contributors to total fish landed in the country accounting for 94.6 percent. Lake Victoria and fish farming remained the two major sources of fresh water fish accounting for 76.7 and 14.4 percent of the total fish output, respectively in 2014. The quantity of fish landed marginally increased from 163,293 MT in 2013 to 167,924 MT in 2014. Total earnings from fish landed rose from Kshs. 21.3 billion in 2013 to Kshs. 22.2 billion in 2014.

Table 1.1: Value of Main Agricultural Exports: (Kshs million)

Commodity	2012	2013	2014

2.0 World Commodity Situation

2.1 Cereals

According to FAO, world cereal production in 2014 was 2,523 million tons, 4.8 million tones lower than what was recorded in 2013. Wheat production achieved a new record, at 718.5 million tons, and coarse grains recorded a slight decline to 1,308 million tons. Unfavorable weather conditions lowered prospects for rice production, which recorded at 496.4 million tons, a decline of 0.4 percent compared to 2013 production.

World cereal utilization in 2014 was recorded at 2,461.3 million tones. This was a growth of 2.2 percent (53.5 million tons) compared to 2013. Based on the latest forecasts for production and utilization, world cereal stocks at the close of the year increased to 627.5 million tons, up from 579.5 recorded at the close of 2013. Maize accounted for the biggest increase, followed by wheat, while rice stocks declined. The overall positive result in the cereal stocks-to-use ratio increased to 25.2 percent in 2014 from 23.5 percent in 2013, which was the highest since 2001.

Abundant supplies recorded in 2014 resulted in sharp decline in international prices of all cereals, with the exception of rice. However, the lower prices did not stimulate trade, as the major cereal importing countries held large supplies, resulting in depressed import demand. As a result, total cereal trade contracted by 5.0 percent to 337 million tons in 2014.

Table 2.1: World Cereals Situation (million tons)

Year	2009/10	2010/11	2011/12	2012/13	2013/14	2014/15*

Source: FAO, GIEWS, * Projections as at November, 2014

2.2 Wheat

World production reached 718.5 tons in 2014, a marginal increase from the 2013 recorded output. Large production gains from the Russian Federation, as well as China and India, compensated for lower supplies from Australia, Canada and the United States.

World wheat trade in 2014 contracted to 150 million tons, 7.3 million tons (4.6 percent) below the recorded level of 2013. The reduction was attributed to lower import demand in Asia and Africa, more than offsetting a rise recorded in Europe. Total wheat utilization in 2014 was at around 701 million tons, 1.7 percent higher than in 2013.

World wheat inventories reached 192.4 million tons by the end of 2014; this was the highest level since 2003. The world wheat stock-to-use ratio increased from 25.2 percent in 2013 to 26.9 percent in 2014. International wheat prices came under strong downward pressure, falling to their lowest levels in four years.

2.3 Coarse Grains

World coarse grains production reached 1,308 million tons in 2014 a slight decline from 2013 records. Maize output reached 1,018 million tons, 0.7 percent above the recorded output in 2013. The expansion in world maize production was mainly in China and the United States, as well as significantly higher outputs for the EU and the Russian Federation. World barley production was recorded at 140.2 million tons, 4 percent below 2013 level. The global sorghum production stood at 60.1 million tons, virtually unchanged from 2013.

World trade in coarse grains in 2014 declined to 147 million tons, down by 6.9 percent from the 2013 levels. Maize was responsible for the bulk of this decline, with total maize imports contracting by 4.5 percent to 114 million tons. World trade in barley slightly declining to 21 million tons, while global imports for sorghum declined to 7.5 million tons, down by 600 tons from the previous season's level.

The global utilization of coarse grains in 2014 increased by 1.9 percent to 1 260 million tons, which compares with a 6.0 percent expansion estimated for 2013. This was as a result of a slower rise in feed intake in the United States.

Based on global production and utilization, world stocks of coarse grains in 2014 increased to 257.4 million tons, 16 percent above their opening levels and the highest level since 1986. Good crop production and rising inventories continued to put downward pressure on international prices with maize prices in September falling as much as 25 percent below their corresponding level in 2013.

2.4 Rice

After two seasons of below trend growth, global rice production fell marginally in 2014. However, global rice stocks were sufficient to cover more than a third of the 2015/16 projected world consumption. The decline in rice production was as a result of erratic weather conditions across all rice producing regions. A decline of 0.4 percent, to 496.4 million tons of milled rice equivalent was recorded in 2014. There were major output shortfalls, in absolute terms, recorded in India, Indonesia, Nepal, Sri Lanka and Thailand.

Taking advantage of the lower international prices and in anticipation of possible production setbacks, many countries imported rice from world markets during the course of 2014. This strong import demand, combined with large supplies in major exporting countries, sustained a 7 percent increase in the volume of rice transactions in 2014 to record 39.7 million tons. World rice trade is expected to grow further in 2015, although by only 0.7 percent, to about 40 million tons.

Table 2.4: Selected International Prices for Rice (US\$/ton)

Source: FAO Rice price indices, 2014

2.5 Cotton

Global cotton stocks for 2014 increased as a result of lower consumption. A reduction in production was recorded in United States and Greece, with smaller revisions in several other countries. Global consumption was reduced by nearly 1.3 million bales, compared to 2013 which reflected lower utilization in China, India, Brazil, Pakistan, and Turkey. The projected world consumption growth rate of 3.3 percent was not realized since the cotton mills did not respond as expected to the lower cotton price. World ending stocks were recorded at over 108 million bales.

Table 2.5: World Cotton Situation (Million Bales)

	2009/010	2010/011	2011/012	2012/013	2013/014	2014/015*
Production	101.63	115.28	124.13	123.023	116.52	119.4

End of Year Stock	44.34	45.22	69	89.65	99.92	108

Source: USDA – WASDE,*Projection as at November, 2014

As indicated in Table 2.5, global cotton output in 2014/15 reversed the consistent decline recorded since 2012/013 to record an increase of 2.5 percent.

2.6 Sugar

The FAO forecasted world sugar production increase in 2014/15 and to surpass consumption for the fifth consecutive season. Falling sugar outputs in Brazil, China and Pakistan were anticipated to be offset by expansions in India, the EU and the Russian Federation.

World sugar consumption was set to grow in line with its long-term trend observed since 2010/011. This reflected an increased consumption in several developing countries as a result of falling domestic sugar prices as well as improved economic performance. The positive economic performance supported sugar demand, as manufacturing and food preparation sectors, which account for the bulk of aggregate sugar consumption, are normally influenced by the economic environment.

Falling international sugar prices were expected to stimulate global import demand and boost world sugar trade in 2014/15. Exports were anticipated to remain unchanged in Brazil, the world's largest sugar producer and exporter, but to rise in Thailand.

Table 2.6: World Sugar Situation

Source: International Sugar Association and USDA. *Projections.

2.7 Coffee

Global coffee production in 2013/014 was estimated at around 8.52 million tons compared to 8.80 million tons recorded in 2012/013. This represented a 3.2 percent reduction which was as result of outbreak of coffee leaf rust disease in some major coffee growing countries in Central America. Prospects for 2014/015 are not so good as a result of drought in Brazil and lower output in Indonesia.

Production in Africa fell slightly to 0.962 million tons, or 11.3 percent of the world total production. Ethiopia recorded the largest production in the region, at 0.39 million tons, followed by Uganda at 0.222 million tons and Côte d'Ivoire 0.114 million tons. Kenya production was relatively unchanged at 0.051 million tons.

Total demand in calendar year 2013 was estimated at 8.766 million tons, and a growth of 2.1percent per annum was recorded over the preceding four years. This growth was mostly driven by increased demand in exporting countries and new consuming countries, which have registered an average annual growth rate of 3.1percent and 2.7percent respectively since 2010.

After declining almost continuously in 2011/12 and 2012/13, coffee prices recovered strongly in 2013/14. Early in the year, Brazil suffered one of its worst droughts on record, leading the International Coffee Organization (ICO) composite price to soar from under US\$ 2/kg in mid-November 2013 to a high of US\$ 3.6 in April 2014. The ICO composite price for the year 2013/14 averaged US\$ 2.82/kg, 11.3 percent higher than the 2012/13 average.

Coffee stocks and inventories were mostly higher in 2013/14 compared to previous seasons. Stocks in coffee producing countries increased from 1.278 to 1.356 million tons at the end of the crop year, due to good stocks held by Brazil and Vietnam. Importing countries also replenished their coffee inventories, up to 1.398 million tons by September 2014, from 1.26 million tons in September 2013.

Table 2.7: Coffee Production by Exporting Countries

2.8 World Fertilizer Situation

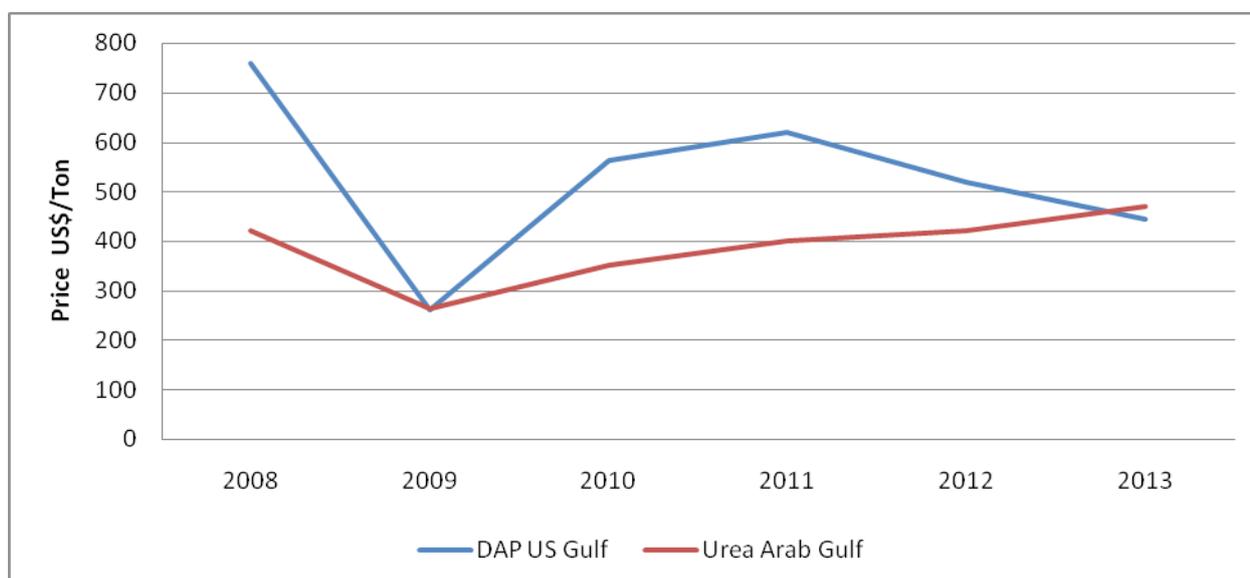

Figure 2.1: Trend of some World Fertilizer Prices

Source: International Fertilizer Association

Global potash exports from producing countries totaled approximately 53 million tons in 2014 as significant market uncertainty during the second half of the year impacted negatively on demand. It is estimated that global consumption exceeded shipments for the second consecutive year as usage of the fertilizer for agriculture was not affected by uncertainty in market conditions that prevailed.

With low global opening inventories and higher projected consumption, global exports increased in 2014. Demand in the first half of the year was particularly robust, increasing by more than 10 percent compared to first-half of 2013 to approximately 32.5 million tons. With an expectation of strong demand through the balance of the year, it was expected that exports in 2014 would surpass the previous record and reach more than 58 million tons.

Global demand for nitrogen grew at a historically consistent rate, this was caused by strong demand from the US, Latin America and India. However, export supply had been more unpredictable, which has contributed to volatile nitrogen markets in recent years.

Ammonia production from the Former Soviet Union (FSU) countries was relatively stable over the previous three years. This was supported by strong global markets. Russia and Ukraine were the largest producers of ammonia, accounting for 66 percent and 20 percent, respectively, of the regional total.

During the period under review, Ukrainian production was affected by political tension, uncertain natural gas supply and pricing terms. The country's production was estimated to have dropped to approximately 50 percent of typical levels. However, ammonia production in Russia was not significantly impacted by regional tensions or trade sanctions.

2.9 World Fish Production Situation

Global fish production grew steadily in the previous five decades from a low of 20 million tonnes in 1950 to 165.9 million tonnes in 2014 (Table 2.8). World per capita apparent fish consumption increased from an average of 9.9 kg in the 1960s to 20.0 kg in 2014. This impressive development has been driven by a combination of population growth, rising incomes and urbanization, and facilitated by the strong expansion of fish production and more efficient distribution channels.

Total global capture production from both inland and marine of 93.7 million tonnes in 2011 was the second-highest ever, slightly below the 93.8 million tonnes of 1996. The year 2013 had a new maximum production of 92.4 million tonnes while in 2014 the production declined slightly by 0.4 percent to 92.0 million tonnes.

World aquaculture production continued to grow, albeit at a slowing rate. According to the latest available statistics collected globally by FAO, world aquaculture production attained another all-time high of 73.9 million tonnes of food fish in 2014 a growth of 4.9 percent from 70.5 million tonnes in 2013. The term "food fish" includes finfishes, crustaceans, molluscs, amphibians, freshwater turtles and other aquatic animals (such as sea cucumbers, sea urchins, sea squirts and edible jellyfish) produced for the intended use as food for human consumption. The global trend of aquaculture development gaining importance in total fish supply remained uninterrupted. Farmed food fish contributed 44.5 percent of the total 165.9 million tonnes of fish produced by capture fisheries and aquaculture in 2014.

Table 2.8: World Fish Production and Utilization

Production	2007	2008	2009	2010	2011	2012	2013	2014	Change 2014

2.10 World Livestock Production

Livestock products consumption and livestock trade in the world continued to play a significant role in providing food and livelihood. Consequently, there was a continued and steady significant increase in their consumption and associated trade. This was mainly due to increased population and urbanization creating increased demand of livestock products.

2.10.1 Meat and Meat Products

Table 2.9: World Meat Market (Million tons)

Year	2009	2010	2011	2012	2013	2014*
Production

Total	25.2	26.5	29	29.7	30.1	31.6

Source: FAO, Global Market Analysis “*”=projections

World meat production grew modestly in 2014 to 311.6 million tonnes compared to 308.3 million tons in 2013. Prices at the international level remained high for the past three years, with the FAO Meat Price Index generally oscillating around 185 points. Since April 2014, the index registered further upward movement, reaching 208 points in September. Global meat expanded modestly in 2014, to 31.6 million tons compared to 30.1 million tons in 2013. This was due to a various factors including; production constraints in some of the principal exporting countries, animal health concerns and trade barriers.

2.10.2 Milk and Milk Products

Table 2.10: World Dairy Market (Million tons)

Year	2009	2010	2011	2012	2013	2014*
Total Milk Production	701.4	713.6	742.2	765.6	780.3	792.0
Total Trade	44.3	47	49.7	53.4	53	71.9

Source: FAO, Global Market Analysis, “*” = projections

World milk production grew by 2.4 percent in 2014, a rate similar to previous years, reaching 792 million tonnes. World trade in milk continued to rise from 53 million tons in 2013 to 71.9 million tons in 2014. This is associated with a favourable milk production outlook in most of the major exporting countries and continued strong demand. Asia was expected to remain the main centre for rising international demand in 2014. There were increased purchases for China, Indonesia, Malaysia and Thailand. Asia, Saudi Arabia, the United Arab Emirates, Japan, the Philippines and Singapore remained important markets. As for exports, two principle suppliers, New Zealand and the European Union, recorded an increase in sales.

3.0 CROPS PERFORMANCE

This chapter contains national time-series data and corresponding analysis on food, horticultural and industrial crops.

3.1 Food Crops

3.1.1 Maize

Maize is the most important staple food crop in the country and contributes significantly to food security. In 2014, the national maize production slightly decreased by 2.2 percent from 39.9 million bags achieved in 2013 to 39.0 million bags (90 Kgs). The marginal decline is attributed to poor rainfall distribution that affected Central, Eastern and Coastal regions which normally produce a significant proportion of the crop. However, production of the crop was stabilized by fairly good weather patterns in North Rift, Western and Nyanza regions during the long rains season. The decline was also as a result of Maize Lethal Necrosis (MLN) disease that affected the crop in Rift Valley region. Western and Nyanza regions recorded a consistent improved maize production in the last three years.

Similarly, the area under production decreased marginally from 2.1 million ha in 2013 to 2.1 million ha in 2014. Overall, maize yields per ha remained fairly constant since 2010.

Table 3.1: Maize

Year	2010	2011	2012	2013	2014
Area (ha)	2,008,346	2,131,887	2,159,321	2,123,138	2,116,141

Source: Directorate of Crops “...” = Data not yet available

3.1.2 Wheat

Wheat production decreased by 23 percent from 4,996,012 bags (90kg) in 2013 to 3,651,528 bags in 2014. The yield also decreased by 19 percent from 30.7 bags/ha to 24.8 bags /ha. The reduced production and yields was attributed to poor rainfall experienced during the year in wheat growing zones especially the Narok County, which on average accounts for 45 percent of national wheat production. The demand for wheat products has consistently increased over the last five years leading to an increase in wheat imports.

Table 3.2: Wheat

Year	2010	2011	2012	2013	2014

3.1.3 Barley

Barley is generally grown for malting in beer companies under contractual arrangements. Barley production increased by 13 percent from 640,783 bags in 2013 to 726,687 bags in 2014 while the area increased by 25 percent from 17,225 ha in 2013 to 21,532 ha in 2014. Increased production could be attributed to the growing demand and the increased area under crop.

Table 3.3: Barley

Year	2010	2011	2012	2013	2014

Yield (90 kg/ha)	28.4	38.5	48.6	37.2	33.7

Source: SDA

3.1.4 Rice

Rice production declined from 125,256 MT in 2013 to 112,263 MT in 2014. This decrease was due to insufficient rainfall and water for irrigation in the national irrigation schemes. Area planted increased from 30,206 ha in 2012 to 32,594 ha in 2013, but declined by 7 percent to 30,186 ha in 2014, mainly due to a dry spell that affected upland rice.

3.1.5 Sorghum

Sorghum production progressively increased during the three years period (2012- 2014) especially in the ASAL. This was attributed to the Ministry's efforts to revitalize the crop as one of the Traditional High Value Crops (THVC), and

ready market from beer industry.

Sorghum production increased by 5 percent from 1,876,192 bags in 2013 to 1,972,810 bags 2014. Production was highest in Eastern and Nyanza regions with 761,414 and 757,862 (90 kg bags) respectively. The two regions produced about 72 percent of the total production. Although the area under production reduced, yields per hectare continued to rise for the last three years from 7 bags/ha in 2011 to a high of 9.2 bags (90 kg) in 2014.

Table 3.5: Sorghum

3.1.6 Millet

Millet production increased over the five year period (Table 3.6). This could be attributed to increased awareness leading to adoption of drought tolerant/high yielding varieties. The crop registered a 37.8 percent increase in production from 1,431,311 bags in 2013 to 1,972,810 bags in 2014. Although the area under the crop declined by 17.5 percent in 2014 to a low of 138,829 ha from 168,291 ha in 2013, millet continued to thrive well in the marginal areas of the Eastern and Nyanza regions.

Table 3.6: Millet

Year	2010	2011	2012	2013	2014

3.1.7 Beans

Area under beans production was 1,052,408 ha in 2014 representing a marginal decline of 2.9 percent compared to 1,083,604 ha in 2013 (Table 3.7). Consequently, production also declined, though by a higher margin of 13.8 percent to register 6.8 million bags down from 7.9 million bags produced in 2013. This decline could be attributed to unfavorable weather conditions which resulted to lower yield of 7.3 bags/ha in 2013 compared to 6.5 bags/ha in 2014.

Table 3.7: Bean

Year	2010	2011	2012	2013	2014

3.1.8 Cow Peas

Cowpeas production registered an increase from 1,486,180 in 2013 to 1,540,813 bags in 2014. This could be attributed to the corresponding consistent increase in area under production and the promotion of drought tolerance crops by the ministry and its partners. However, there was a minor decrease in yields from 5.9 bags/ha in 2013 to 5.5 bag/ha in 2014.

Table 3.8: Cowpeas

3.1.9 Green Grams

The area under green grams increased over the years from 147,352 in 2010 to 259,167 ha in 2014 leading to increased production from 680,528 bags in 2010 to 1,345,294 bags in 2014.

3.1.10 Pigeon Peas

The area under pigeon peas increased modestly by 7 percent from 256,396 ha in 2013 to 276,124 ha in 2014. There was however a disproportionate increase in production in 2014 at 3 million bags, a 65 percent increase from the 2013. This was attributed to a 52 percent increase in yield, which was as a result of favourable weather conditions in addition to the government efforts of promoting traditional high value crops. There was an observed trend of yield increase from 2011, with the peak being registered in 2014.

3.1.11 Sweet Potato

There was a marginal increase of 4.4 percent in area under the crop from 58,509 ha in 2013 to 61,067 ha in 2014. Production followed a similar trend, increasing by 4.7 percent from 729,645 MT in 2013 to 763,643 MT in 2014. Yields remained constant at 12.5 MT/ha in 2013 and 2014.

3.1.12 Cassava

The area under production increased by 10 percent from 2012 to 2013 but decreased marginally from 65,634 ha in 2013 to 63,725 ha in 2014, a decrease of 2.9 percent. Despite the decrease in production area there was a marginal increase in production volume by 0.4 percent from 930,922 tons in 2012 to 935,089 tons in 2013 owing to 11.9 percent increase in average yields from 12.7 MT /ha to 14.2 MT /ha. The yields however declined marginally by 5.4 percent from 14.2 in 2013 to 13.5 MT/ha in 2014. The general increase in productivity from 2011- 2014 was attributed to availability of clean planting materials of high yielding varieties through the efforts of the various programmes in the ministry, including THVC programme and the East African Agricultural Productivity Programme. Consumption increased by 22.7 percent from 879,000 tonnes in 2012 to 1,079,000 tonnes in 2013 due to increased awareness on the value of cassava as a food crop.

Table 3.12: Cassava

3.1.13 Irish Potatoes

The area under Irish potatoes in 2014 was 115,603 ha yielding 1626 million tons with a value of Kshs 22.8 billion. Compared to 2013, the area in 2014 increased by 11 percent while the quantity decreased by 2 percent due to unfavorable weather with the value reducing by 752 million. The price of Irish potatoes per kg declined from an average of Kshs 31.15 in 2013 to Kshs 30.90 in 2014 resulting to a reduction in value from Kshs23.6 billion to Kshs22.84 billion. The main challenge in Irish potato production has been limited use of certified seeds, resulting to poor performance.

Table 3.13: Irish Potatoes

Year	2010	2011	2012	2013	2014

3.1.14 Cocoyam

The area under production increased by 27.4 percent from 2,869 ha in 2012 to 3,654 ha in 2013 but dropped in 2014 by 41 percent to 2,155 ha. Total production increased by 69.7 percent from 26,716 tons in 2012 to 45,346 tons in 2013. However, the production reduced by 39 percent from 45,346 tons in 2013 to 27,619 in 2014. This could be attributable to decrease in area under production.

Table 3.14: Cocoyam

3.2 Oil Crops

3.2.1 Macadamia

In 2014, the area under macadamia nuts was 6,059.7 ha with a production of 42,160.3 tons valued at Kshs.3.28 billion. In 2014, the area, production and value increased by 13 percent, 21 percent and 43 percent respectively, as compared to 2013. This is attributable to improved prices. Further the organization of farmers into producer business groups and establishment of produce bulking and collection centres improved both the marketing channels and farm gate prices.

Table 3.16: Macadamia

3.3 Horticulture

3.3.1 Tomato

During the year under review, the area under tomatoes was 24,074 Ha. The area increase from 20,985 Ha in 2013 to 24,074 representing a 15 percent increase. The national production increased from 383,868 Mt to 400,204 Mt while value increased from KES11.65 Billion to KES11.8 Billion. Tomato was mainly produced in Kajiado (14 percent), Bungoma (14 percent), Kirinyaga (10 percent) and Makeni (7 percent). In Kirinyaga and Kajiado, tomato is produced under irrigation schemes namely Mwea and Namelock schemes respectively. Green house tomatoes production has picked up with farmers. However, the main challenge has been bacterial wilt which caused some green houses to be abandoned, occasioning heavy losses to farmers.

Table 3.19: Tomato

3.3.2 Cabbage

Cabbage is grown in the wet areas of the country and is one of the highly consumed vegetables. In 2014, the country produced 442,569 MT of cabbages with a total value of Kshs 4.9 billion. The leading producer of cabbage in the country is Meru County accounting for 45 percent of total cabbage production in the country. Other counties are Nyandarua, Kiambu and Bungoma accounting for 22 percent, 13 percent 10 percent and 8 percent respectively. As compared to 2013, the area declined by 5 percent but the production went down by 2 percent due to the favourable weather conditions in the production areas. The value declined by 4 percent (Kshs 212 Million) due to drop in prices from Kshs11 to KES10 per kg.

3. 3.3 Kales

Kale is the most popular leafy vegetables consumed in the country, because of its short production cycle and high productivity. In 2014, the area under production of Kales was 24,422 ha which produced 348,637MT with a value of Kshs 4.8 billion. Though the area under production increased by 1 percent production decreased by 1 percent respectively as compared to 2013, but value increased by 13 percent due to a rise in the prices from Kshs 12 to Kshs 14 per kg. The leading counties in kale production were Kiambu accounting for 23 percent followed by Kisii, Nyeri and Nyamira which accounted for 9.8 and 4 percent respectively. Kiambu County recorded the highest farm gate price with an average price of Kshs 28 per Kilo and this was attributed to its proximity to Nairobi.

3.3.4 Carrots

Carrot is produced for the domestic market however; small quantities of baby carrots are exported. In 2014, the area under carrots was 5,503 ha, producing 179,844MT with a value of Kshs 2.55 Billion. The leading producer of the crop was Kiambu County accounting 61 percent of the total production and recorded the highest value of 43 percent. The area increased by 3 percent but by contrast production and value decreased by 10 and 4 percent respectively in 2014 compared to 2013 performance. This was attributed to low productivity as the average price rose from 13 to 14.

3.4.5 Banana

Banana is an important source of income and food security among smallholders and large scale farmers. In 2014, the area under banana was 52,102 Ha with a total production of 1.43 million tons valued at Kshs. 18.16 billion. The Area under production increased from 50,718 ha to 52,102 ka representing and value increase by Kshs 413 Million representing 3 percent and 2 percent respectively Murang'a and Bungoma. Counties of Meru, Kirinyaga, Embu and Taita Taveta recorded production of 47.28, 57.78, 48.87, and that do not have access to irrigation especially Murang'a and Bungoma. Counties of Meru, Kirinyaga, Embu and Taita Taveta recorded production of 47.28, 57.78, 48.87, and 50.66 per ha which could be attributed to access water for irrigation, adoption of superior varieties, availability of clean planting materials from Tissue Culture technology, and exposure of farmers to modern agronomic practices. The main varieties grown include: dessert banana cultivars- Grandnain, Gross Mitchel, Williams's hybrid, Lactan, Valery, Chinese Cavendish, Giant Cavendish, Dwarf Cavendish and Apple banana; cooking cultivars which include: Gradi Shisikame, MutaHato, Uganda Green and Ng'ombe and multipurpose cultivars such as Muraru and Goldfinger. The leading counties in banana production were: Meru (14 percent), Kirinyaga (12 percent), Embu (10 percent), Bungoma (8 percent) Taita Taveta (7 percent) Kisii (7 percent) and Muranga (6 percent) among others.

3.4.6 Mangoes

Mangoes production has been on the increase due to increased demand for fresh market fruits, processing, and health concerns. In 2014, the area under mangoes was 47,619 Ha with a production of 744 Million MT, valued at Kshs. 8.9 billion as compared to 7.7 billion achieved in 2013. This steady increase can be attributed to expansion of area especially in North Rift and Eastern region; introduction of marketing systems with various government and private sector initiatives across the value chain and increased consumption of mango juice and salads. The leading counties in mangoes production by value were; Kwale (21 percent), Kilifi (21 percent), (15 percent) and Makeni (13 percent) as shown in table 3.24.

3.4.7 Flowers

The value of flowers rose from 55.97 Billion in 2013 to 59.83 in 2014 representing 7% increase after a 14 percent drop from 64.96 Billion to 55.97 from 2012 to 2013. Roses contributed Kshs 42 billion of the Kshs 59 billion, earned from floriculture in 2014, constituting 70 percent of the total value of floriculture. Counties around Mount Kenya region have been identified as potential in production of high quality flowers. The leading counties in rose production in terms of value are Nakuru, Kiambu, Meru, Machakos, Kericho and Kajiado Other Counties producing flowers include Murang'a, Nyandarua, Nyeri, Trans Nzoia, Uasin Gishu and Baringo.

The major challenges in rose flower production are *Agrobacterium tumefaciens* (crown gall disease). Infected fields are reported to have uneconomically short life-spans of 0 – 8 months. Other challenges include erratic weather patterns and prevalence of pests and diseases attributed to climate change. The cost of investment is also considered prohibitive to many local investors.

3.4 Industrial Crops

3.4.1 Coffee

After a sharp decline recorded 2012 relative to 2011, area under coffee production increased, though marginally, with a slight improvement in 2014 in comparison to 2013. There was a significant increase in production from 39,800 tons in 2013 to 51,500 tons in 2014 an equivalent of 30 percent. This trend could be attributed to better management practices employed at estate and cooperative levels. The value of coffee exports rose by 22.0 per cent, despite a decline of 3.0 per cent in export quantities, due to improved international prices. The improvement in prices was attributed to high quality beans and increased demand for Kenyan coffee for blending other varieties.

3.4.2 Tea

In 2014, both area and production for tea increased by 2.2 and 2.9 percent respectively. In absolute terms, hectareage increased from 198,657 to 203,006 Ha over the two years, whereas production increased from 432,453 to 445,105 tons. Over the same period, Estate sub-sector registered a marginal increase in production of 0.04 per cent from 182,618 tons to 182,686 tons whereas the smallholder sub-sector recorded an increase from 249,835 to 262,419 tons, an equivalent of 5 percent increase. Yield decreased by 3.8 percent for the Estate sub-sector whereas they were maintained at 2 tons/ha for the smallholders sub-sector. Improved production was largely attributed to increase in area under tea coupled by good rains received in tea growing regions in 2014.

Table 3.29: Tea

Year		2010	2011	2012	2013	2014
Production- Estates	Area (Ha)	56,893	64,470	65,700	71,305	74,385

Source: AFFA, Tea Directorate

The average Auction price for Kenya Tea continued on a downward trend since 2012. The price reduced from 268 USD per 100kg recorded in 2013 to 216 for 2014. This was as result of increased global supply and reduced demand of black tea in some key export markets.

3.4.2.1 Tea Exports Destinations

Tea exports and re-exports volumes were higher by 1percent from 494.35 thousand tons recorded in 2013 to 499.38 thousand tons in 2014. Pakistan continued to be the key markets and recorded an increase in import of 11.2 percent. This was however lower than exports to Sudan which grew by 37.1 percent, as shown in table 5.27. New markets recorded during the year included Georgia, Central African Republic and Belarus.

Table 3.30: Tea Production by County (Kgs)

County	2013	2014
Kericho	80,404,839	75,676,067
Bomet	63,897,069	67,422,272

Embu	12,374,133	12,412,954

Source: AFFA, Tea directorate

Kericho, Bomet and Nandi were the leading Counties in term of tea production in 2014 accounting to 47 percent of the total production.

3.4.3 Sugar

Sugar production decreased by 1.25 percent from 600,179 tons in 2013 to 592,668 tons in 2014 mainly due to significant decrease in area under cane in 2014 to 211,342 Ha from 213,920 Ha in 2013, leading to lower cane deliveries. Over the same period, area harvested decreased by 15.9 percent, from 85,857 Ha to 72,181 Ha. On the other hand, yields increased from 77.7 tons/ha to 89.7 tons per hectare due to better management practices and adoption of improved varieties. Efficiency in sugar production continued to hampered by various factors, which included; Low yields, low mill capacity utilization, obsolete milling technology, and poor transport infrastructure. In 2014, imports decreased to 192,121 tons from 238,045 tons recorded in 2013.

Table 3.31: Sugar

Year		2010	2011	2012	2013	2014
Area(Ha)	Under Cane	157,583	179,269	213,710	213,920	211,342
	Harvested	68,738	64,091	84,916	85,857	72,181
Crop Production (tons)		5,475,180	5,307,341	5,822,633	6,673,725	6,477,651

Source: AFFA, Sugar Directorate

3.4.4 Cotton

Cotton production continued on its upward trend after 53 per cent decline experienced in 2012. This was attributed to stabilization of price at 42 per kg recorded in 2013 and 2014. There was a slight improvement in yield as a result of improved management practices employed by the farmers.

Table 5.1: Cotton

Year	2010	2011	2012	2013	2014
Area (Ha)	24,553	32,200	40,208	24,456	24,322

Source: AFFA, Fiber Crops Directorate

3.4.5 Pyrethrum

Area under flower marginally increased from 3,300 Ha in 2013 to 3,700 Ha in 2014. Despite expansion in acreage under production, delivery of dry flowers to Pyrethrum Board decreased from 399 to 358 tons. Illegal trade and hoarding of pyrethrum flowers were the main causes for the low flower deliveries. Earnings from pyrethrum improved from 113 million shilling in 2013 to 226 million shilling in 2014, an equivalent of 100 percent increase. Yields decreased marginally from 0.12 tons/ha to 0.1 tons/ha over the same period.

Table 3.32: Pyrethrum

Year	2010	2011	2012	2013	2014

3.4.6 Sisal

Total sisal production decreased by 2.5 percent to 25,341 tons in 2014 from 25,983 tons recorded in 2013. Domestic consumption of sisal fiber more than doubled from 750 tons in 2013 to 1,737 tons in 2014, this was due to an increasing demand for sisal bags for packaging. In addition, 91 percent of total production was exported in 2014.

Table 3.33: Sisal

YEAR		2010	2011	2012	2013	2014

4.0 FISHERIES PERFORMANCE

4.1 National Fish Production

There was an increase of 2.8 percent from 163,293 MT in 2013 to 167,924 MT in 2014. The value increased from Kshs. 21.3 billion in 2013 to Kshs. 22.2 billion in 2014. The increase in quantity was mainly attributed to increase in production of fish from Lake Victoria and aquaculture. The increase in production from Lake Victoria was attributed to the increase in *Rastrineobola argentea* (Omena) production which increased by 4.2 percent from 66,717 MT in 2013 to 69,561 MT in 2014.

Table 4.1: Quantity and Value of Fish Production

	2010		2011		2012		2013		2014	
	MT	Kshs (bn)	MT	Kshs(bn)

Source: SDF-Annual Statistical Bulletins

In 2014, Homa bay County contributed the highest capture catches by contributing 81,399 MT, followed by Siaya 28,519, Migori 7,899, Kisumu 5,556, Busia 5,468, Turkana 4,050, Kwale 2,643, Lamu 2,507, Kilifi 2,356, Mombasa 1,219, Embu 1,024, Tana River 446, Nakuru 341, Baringo 201, Marsabit 116 and Taita Taveta 115.

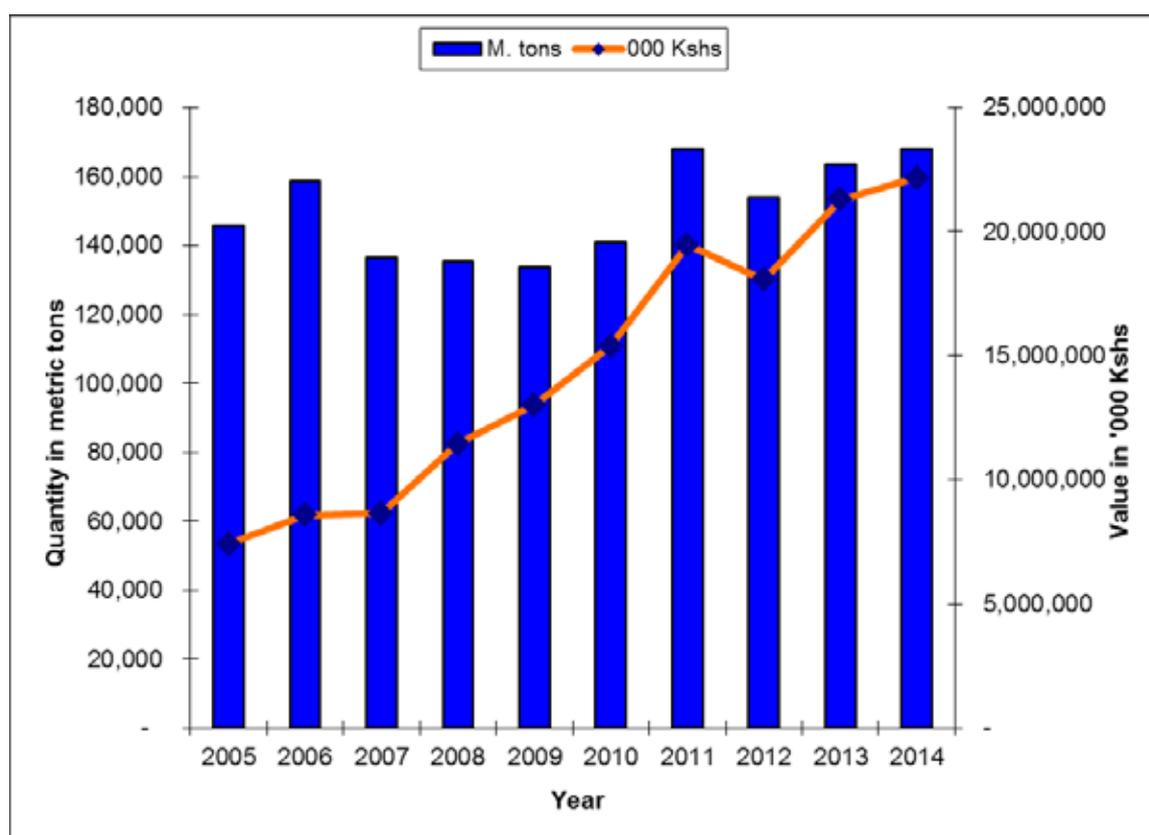

Figure 4.1: Quantity and Value of Fish Production

Inland capture fisheries contributed 81 percent (134,840 MT) of Kenya's total fish production in 2014; Marine artisanal fish production was 8,988 metric tonnes equivalent of 5 percent of the national production while aquaculture production amounted to 24,096 metric tonnes contributing 14 percent of the total production Figure 4.2.

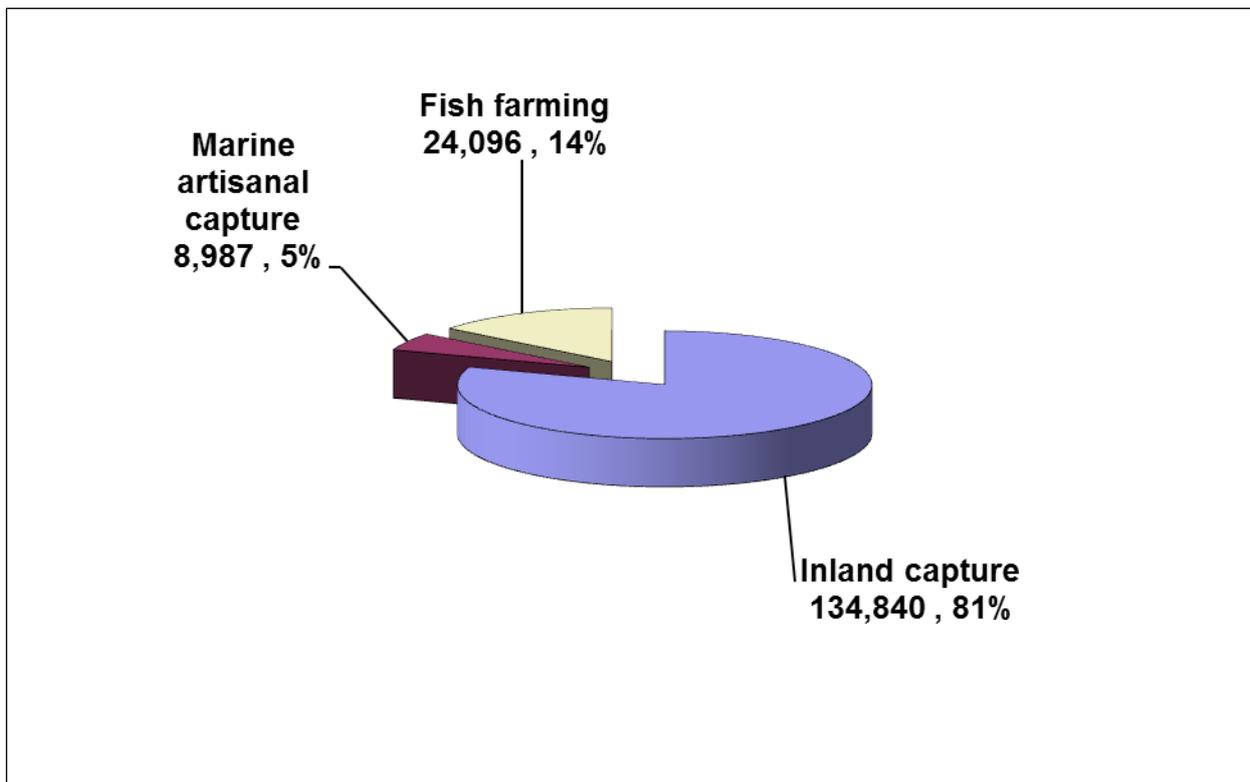

Figure 4.2: National Fish Production by Fishery Category

4.2 Capture Fisheries

Capture fisheries in Kenya is mainly from lakes Victoria, Turkana, Naivasha, Baringo, Jipe, Tana River dams, Tana river delta and Indian Ocean and had a production of 143,828 MT with an ex-vessel value of Kshs 16,559,534,000. This accounted for 86 percent of the national fish production in 2014. Lake Victoria accounted for 89.49 percent of all the fish from capture fisheries in Kenya during the year 2014.

In 2014, Homa bay County contributed the highest capture catches by contributing 81,399 MT, followed by Siaya 28,519, Migori 7,899, Kisumu 5,556, Busia 5,468, Turkana 4,050, Kwale 2,643, Lamu 2,507, Kilifi 2,356, Mombasa 1,219, Embu 1,024, Tana River 446, Nakuru 341, Baringo 201, Marsabit 116 and Taita Taveta 115.

4.3 Aquaculture

The State Department of Fisheries has aggressively been promoting aquaculture development in the country to counter the declining production from capture fisheries. Some of the achievements realized over the review period include; developed a fish breeding structure with a holding capacity of over 200,000 brood-stock; procured 54 Fish Feed Pelletizing machines and distributed them to clusters of fish farmers; procured 148 Motorcycles and recruited 286 Fisheries Extension Officers; constructed (4) Fish Processing Plants in Tetu, Imenti South, Rongo and Lurambi constituencies; constructed over 69,194 fish ponds country-wide (46,824 fish ponds in 160 Constituencies country-wide by GoK, and some other 22,370 ponds by farmers and investors and stocked them with over 100 million fingerlings; increased national aquaculture production from 1,047 metric tonnes in 2005 to 24,096 metric tonnes in 2014, figure 3. The 24,096 metric tonnes had a farm gate value of Kshs. 5.6 billion Compared to 23,501 metric tonnes valued at Kshs. 5.5 billion in 2013.

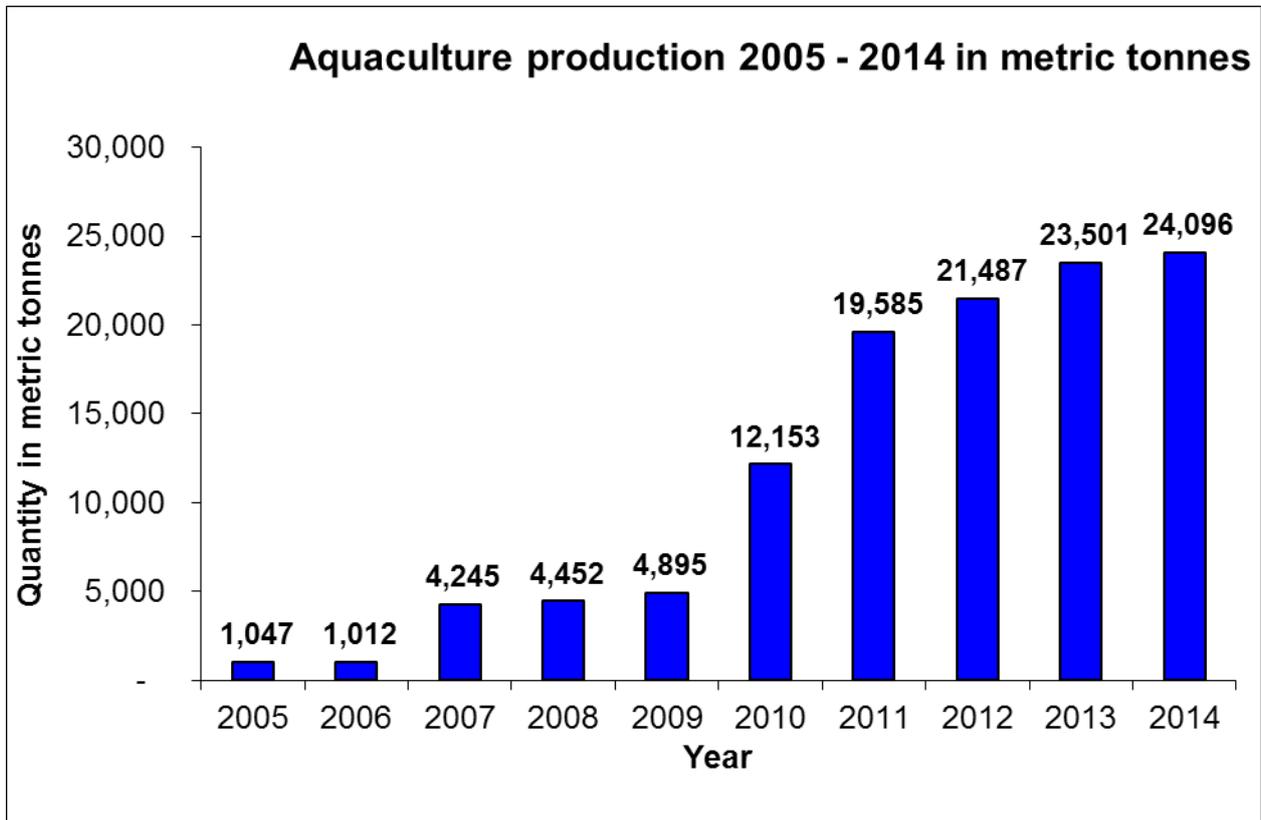

Figure 4.3: Aquaculture Production for last ten years

5.0 LIVESTOCK PERFORMANCE

5.1 Introduction

This chapter presents time series data and corresponding analysis on population of various livestock types and production data for various livestock products. The analysis focuses on the period 2010-2014. Generally, most livestock products recorded improved performance but there were notable variations attributed to changes in weather and market conditions from one year to another. The detailed population and production statistics by Counties is presented in the Annexes.

5.1.0 National Livestock Population

5.1.1 Cattle Population

The population for dairy and beef cattle has generally been increasing growing by 17.5 percent and 30.9 percent from 2010 to 2014 respectively. This is attributed to increasing demand for beef and milk. However, the population for both dairy and beef cattle declined from 2013 to 2014 due to drought.

Table 5.2: Cattle Population

Year	Dairy Cattle	Beef Cattle
2010	3,673,212	10,307,309
2011	3,739,161	10,388,135
2012	4,340,278	12,874,571
2013	4,505,582	13,632,918
2014	4,316,153	13,495,692

Source: SDL

5.1.2 Sheep and Goat Population

Sheep and goat population has been on an increasing trend except for wool sheep whose population reduced by 21.2 percent from 1,094,048 in 2013 to 862,455 in 2014. The decline in wool sheep population may be attributed to competition with synthetic fibre.

Table 5.3: Sheep and Goat Population

Year	Sheep		Goats	
	Wool	Hair	Dairy	Meat
2010	788,775	10,046,589	257,643	17,920,736
2011	798,289	10,140,621	294,279	17,694,066
2012	1,590,387	14,525,314	310,266	21,871,669
2013	1,094,018	15,506,893	360,495	24,276,898
2014	862,455	16,557,752	389,326	25,040,732

Source: SDL

5.1.3 Poultry Population

The indigenous chicken has remained the most popular among Kenyan farmers largely due to low cost of production compared to exotic breeds and preference by consumers. Generally production of broilers and layers registered gradual increase (Table 5.3). This could be attributed to rising population of the middle income group and more people shifting to urban areas.

Ostrich farming targeted particular markets, mainly tourists. The population reduced by a significant 20.2 percent from 3,668 in 2013 to 2,928 in 2014 due to poor performance of the tourism industry during the year.

Table 5.4: Poultry Population

Year	Broilers	Layers	Indigenous Chicken	Ostrich	Others*
2010	2,213,750	2,675,571	24,538,906	1,041	779,568
2011	2,600,924	2,847,225	26,219,935	978	684,243
2012	2,842,440	3,076,808	27,967,976	6,477	689,283
2013	2,745,188	3,675,425	32,569,198	3,668	878,991
2014	3,117,554	3,716,911	34,666,188	2,928	909,841

*= Turkeys, Ducks, Quails, Guinea fowl, Geese, Pigeons and Doves

Source: SDL

5.1.4 Other livestock types

Donkeys and camel population recorded a consistent increase rising by 9.9 percent and 1.7 percent from 2013 to 2014 respectively (Table 5.4). Camels are the main source of livelihood among pastoralists due to their resilience to adverse weather conditions. Pig population has fluctuated marginally from 2010 to 2014. Pig production targets hotel industry and the market dynamics have remained stable for the last five years.

Table 5.5: Population of other types of Livestock

Year	Pigs	Rabbits	Donkeys	Camels	Crocodiles	Guinea Pigs
2010	342,585	633,728	989,389	1,535,473	-	-
2011	344,155	674,897	946,319	1,787,379	-	-

2013	432,979	871,558	1,713,382	2,899,244	27,177	2,170
2014	430,844	874,565	1,882,785	2,937,262	71,500	3,420

= data not available

Source: SDL

5.1.5 Hives

Log hives remain the most popular compared to other types of hives (Table 7.5). This could be attributed to their low cost of production and ease of construction using local materials at the farm level compared to Kenya Top Bar Hives (KTBH), Langstroth and Box hives which are comparatively expensive. The decrease in population of log hives could be due to farmers adopting modern hives like KTBH.

Table 5.6: Hives Population

Year	Hives			
	Log	KTBH	Langstroth	Box
2010	-	-	-	-
2011	-	-	-	-

Source: SDL

5.2 Livestock Products

5.2.1 Milk

Dairy production is the second largest livestock enterprise after meat production and it registered 3.4 billion litres of milk worth Kshs 154 billion in 2014. However, there was a marginal decrease of 7.9 percent compared with 2013 production (Table 5.7). This was due to drought experienced in the year leading to scarcity of livestock feeds. Despite the drop in production, the volume of processed milk increased from 523.0 million litres in 2013 to 541 million litres in 2014 (Economic Survey, 2015).

Table 5.7: Milk Production

Year	Total quantity produced ('000 kgs)	Total Value ('000 Kshs)	Quantity marketed formally ('000 kg)	Total Value ('000 Kshs)
2012	3,190.7	143,581.8	495.2	22,284.0
2013	3,717.8	167,303.1	523.0	23,535.0
2014	3,425.0	154,123.0	541.3	24,358.5

Source: SDL and KNBS

5.2.2 Meat

During the period under review, the country produced 408 MT of meat worth Kshs. 162.3 billion (Table 7.8) Beef production was the main meat produced whose value also registered an increase in 2014 compared with 2013. Other types of meat such as chevon, mutton, pork, rabbit meat, poultry meat and camel meat indicated an upward trend. Poultry production increased in 2014 due to increased demand in major towns.

Table 5.8: Meat Production

Products (MT)	2012		2013		2014	
	Quantity	Total value (Kshs Million)	Quantity	Total value (Kshs Million)	Quantity	Total value (Kshs Million)
Beef	94,823.6	37,929.4	96,764.5	38,705.8	113,450.3	45,380.1

5.2.3 Other Livestock products

Other livestock products such as eggs, honey, wax, wool, hides and skins experienced a slight increase in their production and values in 2014 when compared with 2013 (Table 5.9).

Table 5.9: Other livestock products

Products	2012		2013		2014

6.1.2 Fertilizer Off-Take

The government procured a total of 444,805 MT of fertilizer under the bulk procurement strategy between the year 2009 and 2014 as a price stabilization mechanism. This intervention is aimed at availing fertilizer to farmers at a lower price so as to prompt private dealers to reduce their profit margins hence making fertilizer cheaper. Since inception of the subsidy initiative, fertilizer prices have remained stable and generally low compared to prices in the year 2008. This has enabled more beneficiaries (farmers) to afford fertilizer leading to incomes/profitability. Table 6.2 shows the amount of fertilizer procured by the government for subsidy and the money allocation to the intervention since the financial year 2009/2010 to 2013/2014.

6.1.2.1 Fertilizer Cost Reduction Strategy

A total of 444,805 MT of fertilizer was procured between 2009 and 2014 as a price stabilization mechanism. This intervention was aimed at contributing cheap fertilizer into the market to prompt private dealers to reduce their profit margins hence making fertilizer cheaper. Table 6.2 shows the funds spent by the government since the intervention started.

Table 6.2: Quantities of Fertilizer Procured under Government Bulk Procurement initiative

Financial Year	Total fertilizer requirement	Quantity of conventional fertilizers required	percentage of conventional fertilizers procured	Quantity Procured (MT)	percent of conventional fertilizers procured	Treasury allocation for Fertilizer Procurement (Kshs. M)
2009/2010	503,784	384,406	0.76	16,624	4.32	758
2010/2011	505,489	365,561	0.72	96,000	26.26	2,995
2011/2012	539,910	387,401	0.72	94,155	24.30	3,320
2012/2013	542,780	379,946	0.70	66,276	17.44	3,150
2013/2014	568,000	431,680	0.76	171,750	39.79	3,900
Total	2,659,963	1,948,994	0.73	444,805	22.82	14,123

Source: SDA

From table 6.2, it can be noted that the initiative contributed 22.82 percent of the conventional fertilizer requirement in the country for the last five years. Funding has been the major constraint since allocation from treasury on fertilizer procurement has been low. Under the bulk procurement initiative, the Ministry worked closely with National Cereals and Produce Board, Agricultural Development Corporation (ADC) and Kenya Seed Company (KSC) Ltd. The ADC and KSC usually purchase their quantities for certified seed production while the Ministry and NCPB procure quantities which are sold to farmers through NCPB network at subsidized prices.

Table 6.3: Fertilizer Subsidies

Fertilizer Type	Market price for 50kg bag Price (Kshs.)	Subsidized price for 50kg bag Price (Kshs.)

Table 6.4: AFC Lending to the Agricultural Sector

Financial Year	Amount Disbursed in Kshs. Millions	Number of Beneficiaries
2009/2010	1,533	6,256
2010/2011	2,146	7,742
2011/2012	1,671	8,499
2012/2013	3,318	17,414
2013/2014	3,229	16,887

Source: SDA

The Government, through the Agriculture, Food and Fisheries Authority (AFFA) Established Commodities Development Fund, which was made operational in August 2014 by merging the coffee Development Fund and the Sugar Development Levy. A total of Kshs 2.321 billion has so far been disbursed to coffee farmers in the coffee (Kshs 421 M) and Sugar (Kshs 1.9 billion) sub-sectors.

Agricultural Credit Guarantee Scheme (ACGS) has been implemented through the National Accelerated Agricultural Inputs Access Programme since 2008. Through the agreement signed by the Government and Participating Financial Institutions (PFIs) in implementation of ACGS, as at December 2014, four (4) PFIs namely Kenya Women Finance Trust, Cooperative Bank of Kenya, Family Bank and Equity Bank had cumulatively disbursed KSh 3.4 billion to 25,071 beneficiaries who included small scale farmers, agro dealers and other value chain players.

The government and its partners namely Equity Bank, Alliance for Green Revolution in Africa (AGRA), and International Fund for Agricultural Development (IFAD) implemented the Kilimo biashara partnership which supported access to farm inputs by farmers, input stocks by agro dealers and farm machinery by large scale farmers. As at December 2014, KSh5 billion had cumulatively been lent to 69,000 beneficiaries.

The Ministry implemented a number of programmes aimed at enhancing access to inputs by famers. The Kilimo Plus programme supported resource poor farmers with targeted subsidy in the form of an inputs package for growing one (1) acre of maize. In 2013/2014 FY the programme supported 9,050 farmers with inputs worth Kshs. 990 Million.

The Kenya Agricultural Genetic Resources Centre (KAGRC), through its network of agents distributed 566,506 and 626,009 vaccine doses in 2013 and 2014 respectively. The agent prices were on average lower than the non-agent prices by 14 percent for most breeds.

6.1.3 Access to Credit

The AFC remained a key player in advancement of Agricultural credit to farmers while many commercial banks significantly increased lending to the sector. In the financial years 2012/2013 and 2013/14, AFC disbursed Kshs. 3.32 billion and Kshs. 3.23 billion to farmers respectively. The corporation had disbursed KSh 1.91 billion to farmers during the 2014-2015 FY asat March, 2015.

6.1.4 Wholesale and Retail Prices

Both wholesale and retail prices for food crops have remained relatively stable for the last three years (2012-2014). For example, the dry maize wholesale price per 90 Kgs bag slightly increased from Kshs. 2,861 in 2013 to Kshs. 2,928 in 2014. This was stable price compared to the year 2012 price of Kshs. 3,133 per 90 Kgs bag. The price of kales, cabbages and crops slightly reduced. Kales wholesale price went down from Kshs. 1,107 in 2013 to Kshs. 925 in 2014. However prices of some food crops slightly went up in the year 2014 compared to the year 2013. For example the retail price of beans rose from Kshs. 71.81 in 2013 to Kshs. 76.82 per kilogram in 2014. Similarly the price of tomatoes increased from Kshs. 58.22 in 2013 to Kshs. 63.22 in 2014 per kilogram.

6.2 Fisheries Inputs

6.2.1 Fishing Crafts and Gears

In 2014 there were a total of 18,520 fishing crafts country wide distributed as follows: lake Victoria 13,402; Marine artisanal 2,913; lake Turkana 1,650; Tana river dams 180, lake Kanyaboli 99; Tana river delta 93; lake Naivasha 50; lake Baringo 47; lake Jipe 46 and lake Kenyatta 40. The prices of net gears such as gill nets, small seines depend on the plier that is the strength of the thread. For hooks the prices depend on the hook size and the material the hook is made of. Prices of gill nets or small seine nets when mounted range from Kshs 4,500 – 7,500 for 100 metres net while hooks prices range from Kshs 200 – 250 per packet with 100 hooks.

6.2.2 Fish Feeds

Currently the price of fish feeds ranges from Kshs 80 – 120 per kg depending on the crude protein level. The higher the crude protein levels the higher the price. The combined effect of poor quality and high costs results in low productivity. Some fish farmers cluster groups have resulted to bulk manufacturing of fish feeds hence enjoying the economies of scale. Technical officers have been training the farmers on formulations of homemade fish feed rations. The national government in an attempt to ensure access to affordable and quality fish feeds, provided cottage fish feed pelletizing machines to cluster groups in the Country.

6.2.3 Fish Seeds

In Kenya aquaculture's contribution has in the recent years began to increase and is expected to continue to rise. The rapid growth of aquaculture has seen a great deal of increased requirement for large volumes of fish seed. Current national seed requirements stand at 100,000,000 fish seed per year. The Ministry has facilitated upgrading of Sagana Culture Farm into a National Research & Training Centre with a holding capacity of over 200,000 brood-stocks. It has trained and authenticated over 100 hatchery operators to produce high quality fish seeds to meet the demand. A national seed certification programme has been developed.

The price of fingerlings varies depending on size and sex. For example tilapia mixed sex of 5 cm costs Kshs. 8, while 10 cm was Kshs. 10, monosex (all males) 5 cm Kshs. 10 and 10 cm was Kshs. 15. On the other hand catfish of 5 cm costed Kshs. 10 and while the 10 cm was at Kshs. 20.

The Ministry constructed over 27,000 fish ponds at a cost of Kshs. 25,000 per pond. Additionally the government stocked the ponds with 27 million fingerlings costing a total of KShs. 270 million and farmers provided with a feed package amounting to KSh1.20 billion. The initiative benefitted 25,000 farmers.

6.3 Livestock Inputs

6.3.1 Commercial feeds and supplements

The commonly available commercial feeds used as supplements in the livestock industry and their average prices are shown in Table 6.11. Due to high in the cost of ingredients needed to manufacture the concentrates, prices were generally on the upward trends.

Table 6.11: Commercial Feeds and Supplements

Feed Type	Quantity	Price in 2012	Price in 2013	Price in 2014
Hay bale	20kg	-	-	250
Dairy meal	70kg	1,900	1,800	2200
Dairy cubes	70kg	-	2,300	2500
Calf pellets	70kg	-	2,400	3000
Chick and duck mash	70kg	2,750	2,500	2,500
Layer mash	70kg	-	-	2900
Growers mash	70kg	2,250	2,500	2,200
Pig finisher	45kg	2,200	1,500	1,750
Wheat bran	30kg	700	1,000	700
Fish meal	1kg	70	80	100
Cotton seed cake	1kg	60	60	60
Maize germ	1kg	35	40	50

6.4 Agricultural Mechanization

Currently the use of motorized power stands at 30 percent, hand and animal draught (ADP) is 50 percent and 20 percent respectively. Provision of agricultural mechanization services is offered by individual farmers, private contractors and the public sector including Agricultural Mechanization Stations (AMS) and Agricultural Technology Development Centers (ATDCs).

6.4.1 Investments in Agricultural Mechanization

Kenya has about 10,000 tractors with similar number of implements for other farm operations. An additional 3,500 tractors are required to replace the old ones. Approximately 1000 tractors are imported annually leaving a deficiency of 2500 tractors. The major investors in mechanization are the private sector with the Government complementing and intervening in areas of deficiencies.

Table 6.12: Tractor Imports 2004 - 2013

Source AES and KRA import documents 2004-2014

6.4.2 Agricultural Technology Development Centres (ATDC)

These centers were established in 1986 as Rural Technology Development Centers and rebranded into ATDC. The establishment of the centres was supposed to address the challenges of on farm mechanization, value addition, and post-harvest management for small to medium scale farmers.

Following devolution, the changed mandate of ATDCs will be to assist the National Government in influencing policy applications, monitoring and evaluations in agricultural subsector. The centers are distributed across the country based on ecological zones.

6.4.3 Validated technologies promoted

Land preparation equipments includes:-

Ploughing:- Animal draft plough with ridger, cultivators; walking 18HP tractor with metal wheels, moldboard plough, trailer, other small tractors and attachments plough, ridger, and trailer and power tillers; animal drawn equipment with attachments zim-plough, rippers, cultivator and sub-soiler;

Rotavation:- Walking 18HP tractor with rotavator;

Planting: - Hand jab planters, animal drawn no-till seeder and animal drawn precision planters,

Crop protection equipments:- Manual zim-wipers for herbicides, manual drawn sprayers and animal drawn boom sprayers,

Conservation Agriculture equipments:- Small tractor 16hp with CA direct seeder, sub soiler, trailer, and boom sprayer.

7.0 KEY RECENT REFORMS

The Ministry has undertaken various reforms geared towards improvement of service delivery in line with the national functions articulated in the Constitution. Among these include policy, institutional and regulatory reforms.

7.1 Ministry Semi-Autonomous Government Agencies (SAGAs)

The Ministry has a number of SAGAs that contribute to national development through carrying out regulatory, commercial, service and training functions. A major reform indicator include; the operationalization of Agriculture Food and Fisheries Authority (AFFA) Act 2013, and Kenya Agriculture and Livestock Research Organization (KALRO) Act 2013. The Science, Technology and Innovation (STI) Act 2012 was also operationalized resulting to reforms in Kenya Marine and Fisheries Research Institute (KMFRI). The KALRO Act resulted in consolidation of four research institutions namely; Kenya Agricultural Research Institute (KARI), Kenya Sugar Research Foundation (KESREF), Tea Research Foundation (TRF) and Coffee Research Foundation (CRF). The AFFA is composed of Oil and Nuts, Horticultural Crops, Fibre Crops, Coffee, Tea, Sugar, Food Crops and the Pyrethrum and other Industrial Crops Directorates. The AFFA Act also establishes the Fisheries Directorate which is yet to be operationalized.

7.2 Inter-Governmental Secretariat (IGS)

The Intergovernmental Relations Act of 2012, provided for the establishment of various institutions to provide platform for engagement and dialogue between the two levels of governments. In September, 2013, Ministry of Devolution and Planning organized a meeting where a decision was made that Intergovernmental Consultative Forum (ICF) be established in Ministries that had their functions significantly devolved. The Ministry of Agriculture, Livestock and Fisheries is one of those Ministries whose functions had been substantially devolved and this necessitated establishment of the IGS with a purpose of facilitating engagement between the National Government and County Governments and relevant stakeholders. The Secretariat provides a platform for dialogue between critical stakeholders in the sector by acting as the liaison agent between the National and County governments. Further the IGS coordinates the attainment of policy goals and standards in the sector.

7.3 Transformation Secretariat (TS)

Transformation Secretariat is a Secretariat of Joint Technical Working Group (JTWG) between the ministry's top management and development partners. TS develops and supports the common programmes framework (CPF) that defines broad programmes and projects areas for elaboration of projects for support by development partners for funding by Deputy President and the Government. It is responsible for supporting and coordinating transformation initiatives in the ministry and the sector.

7.4 Policy Development and Review

Various policies and strategies have been reviewed and/or developed from 2010 to date. These include: National Agricultural Research Systems Policy (NARSP) 2012, National Livestock Policy(2008); National Oceans and Fisheries Policy,2008; National Aquaculture Communication Strategy, 2011; National Food and Nutrition Security Policy (NFNSP) 2012; National Seed Policy 2011; National Agriculture Sector Extension Policy (NASEP) 2012, National Agribusiness Strategy (NAS) 2012, National Horticulture Policy, 2012, National Rice Development Strategy, National Tuna Fisheries Management and Development Strategy, 2013; and National Aquaculture Policy, 2011.

Drafts for several other policies and strategies such as the Livestock Breeding Policy, Animal Feeds Policy, Veterinary Policy, National Sugar Strategy; National Dairy Development Policy, National Poultry Policy, Bee Keeping Policy, Camel Policy, National Marine Fisheries Strategy, Fisheries Monitoring, Control and Surveillance Strategy. National Urban and Peri-Urban Agriculture Policy, National Emerging Crops Policy, National Agriculture Policy, Livestock Insurance Policy, National Emerging Livestock Strategy, Agro-Chemical Policy, National Organic Agricultural Policy. National Cotton Policy, National Cereals Policy, National Oil and Nut Crops Policy and National Irrigation Policy, the Gender Policy are in various stages of development.

The Agriculture, Fisheries and Food Authority (AFFA) Act, 2013; Crops Act, 2013; Pyrethrum Act 2013, the KALRO Act 2013; and were passed by Parliament and their requisite regulations developed. Warehouse Receipting Bill was finalized and various others were forwarded to parliament which include; Livestock Bill; Fisheries Management Development Bill; Seed and Plant Varieties Amendment Act; Sugar Amendment Bill; and Coffee Amendment Bill. The Kenya School of Agriculture Bill was finalized awaiting forwarding to Parliament.

8.0 Trends in Budget Allocation to Ministry

8.1 Contribution of Agriculture to the Economy

The Agriculture Sector contributes directly to the national economy through income generation, employment and wealth creation, foreign exchange earnings as well as ensuring food security. On average, the sector contributes about 26 percent to the GDP and accounts for 60 percent of total export earnings. It accounts for 65 percent of Kenya's total exports and 18 percent and 60 percent of the formal and total employment respectively. It further contributes about 75 percent of industrial raw materials.

8.2 Allocation and Expenditure analysis for 2012/13 – 2014/15

The total allocation to agriculture increased from Kshs.32.5 billion in 2012/13 to Kshs 45.8 billion in 2013/14 and decreased to Kshs 36.9 billion in 2014/15 (Table 8.1). The increase in 2013/14 was attributed to a new programme on irrigation and drainage infrastructure that was allocated Kshs 12 billion while the decrease in 2014/15 was as a result of devolved functions and a total of 12,590 staff to County Governments. Total absorption rate declined from 84.7 percent in 2012/13 to 82.5 percent in 2013/14. This was occasioned by challenges in procurement and Donor conditionalities, among others.

Table 8.1: Allocation and Expenditure analysis

Vote	Approved Estimates (Million KShs)				Actual Expenditure (Million KShs)		
	2011/12	2012/13	2013/14	2014/15*	2011/12	2012/13	2013/14
Recurrent	13,490	14,404	12,560	10,714	13,042	13,690	11,714
Development	18,692	18,129	33,269	26,267	14,448	13,879	26,081
Total	32,182	32,533	45,829	36,981	27,490	27,569	37,795

*Printed Estimates

Source: 2013 and 2014 ARUD Sector Reports

An analysis of the expenditure trends for the period 2011/12-2013/14, indicate that, in general, Development expenditure was lower at 77.6 percent compared to Recurrent expenditure at 95 percent. This was attributed to low absorption by development projects and programmes owing to a number of challenges which include Donor conditionalities and slow procurement processes, among others. In 2013/14, the Development expenditure was 78.4 percent compared to 93.3 percent Recurrent expenditure.

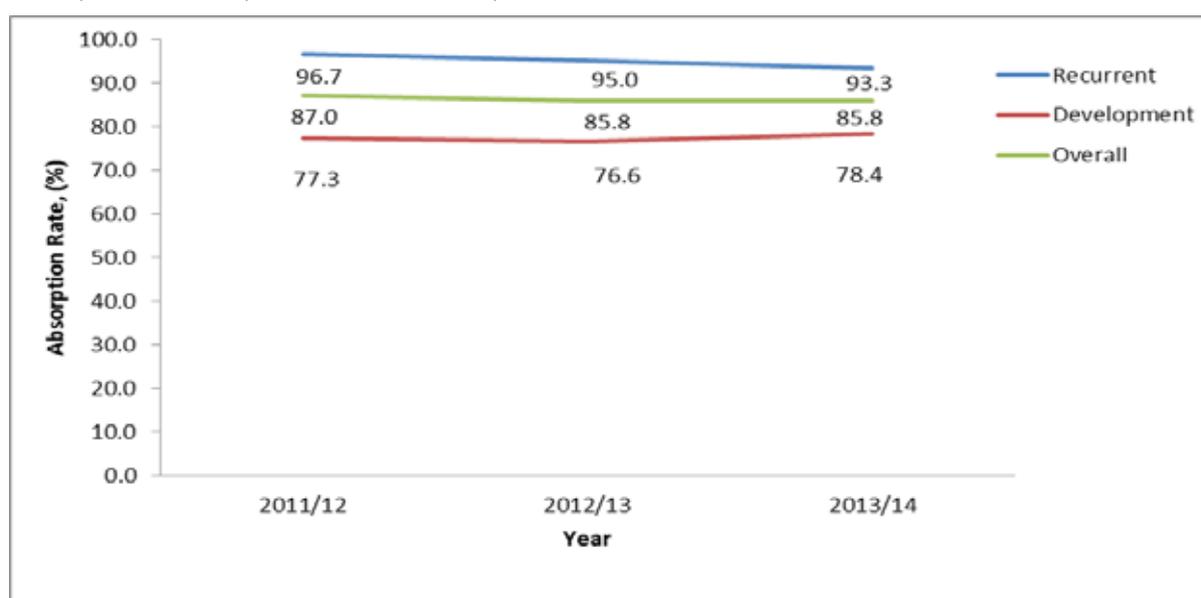

Figure 8.1: Ministry Absorption Rate

Source: MOALF

8.3 Analysis of Resource Allocation by State Departments

In 2014/15, the State Department of Agriculture received 79 percent of the resources while Livestock and Fisheries received 15 percent and 6 percent of resources respectively (Table 8.3).

Table 8.2: Resource Allocation by State Departments

State Department	Approved Estimates (Kshs Million)			
	2011/12	2012/13	2013/14	2014/15*
Agriculture	20,848	21,454	38,251	29,313
Livestock	7,002	7,492	4,678	5,533
Fisheries	4,332	3,587	2,941	2,134
Total	32,182	32,533	45,870	36,980

* Printed Estimates

Source: 2014 ARUD Sector Report

The huge budget for State Department of Agriculture in 2013/14 was attributed to a new programme on irrigation and drainage infrastructure that was allocated Kshs 12 billion.

8.4 Analysis of Recurrent Budget

The Recurrent allocation to the Ministry declined by 20.6 percent from KSh.13,490 million in 2011/12 to Kshs 10,714 million in 2013/14 (Table 8.3). This was occasioned by devolution of some Ministry functions and staff to the counties during the period under review. The absorption of the Recurrent budget dropped from 96.7 percent in 2011/12 to 94 percent in 2013/14.

Table 8.3: Trends in total Recurrent expenditure by State Departments

State Departments	Approved Budget Estimates (Kshs. Millions)				Actual Expenditure (Kshs. Millions)		
	2011/12	2012/13	2013/14	2014/15*	2011/12	2012/13	2013/14

8.5 Analysis of Development Expenditure

The Development budget of the Ministry increased substantially from Kshs.18.7 billion in 2011/12 to Kshs. 33.3 billion in 2013/2014 (Table 8.4). This was mainly due to enhanced funding for irrigation development in the Galana/Kulalu Food Security Project. Actual expenditure increased from 76.6 percent in 2012/13 to 78.4 percent in 2013/2014.

Table 8.4: Analysis of Development Expenditure by State Departments

State Departments	Approved Budget Estimates				Actual Expenditure		
	2011/12	2012/13	2013/14	2014/15*	2011/12	2012/13	2013/14

9.0 PROGRAMMES AND PROJECTS

9.1 Overview

The Ministry of Agriculture, Livestock and Fisheries supports agricultural and economic development through implementation of various initiatives. The initiatives are designed in form of projects and programmes that are financed and implemented by GoK or in collaboration with Development Partners. Some fall under the mandate of one State Department while others cut across the State Departments and the agriculture sector. The projects and programmes objectives spin around achievement of food security, increasing agricultural productivity, employment creation, income generation and, poverty reduction.

There are many Projects and Programmes in the Ministry and this section capture major ones. Administration of these initiatives is at a national level and Development Partners channel financial support via the National Treasury.

9.2 State Department of Agriculture Programmes and Projects

State Department of Agriculture, projects and programmes are coordinated through Agricultural Projects Coordination Unit (APCU). The major (Table 9.1) Programmes and Projects are summarized below indicating their scope, status and cost:

Table 9.1: State Department of Agriculture Projects and Programmes

S/No	Name	Scope	Objective	Period and Status	Cost/ source of Funds
1	Agricultural Sector Development Support Programme (ASDSP)	National-47 Counties	To increase equitable income, employment and improve food security of male and female target groups through improved production and productivity in the rural smallholder farm and off farm sectors	2012 to 2017 ongoing and on schedule	GoK/ SIDA, KES 5.087 Billion from SIDA and KES 1 Billion from GoK, total KES 6.087Billion
2	Kenya Agricultural Productivity Project and Agribusiness Project (KAPAP)	20 Counties	To increase agricultural productivity and incomes of participating smallholder farmers	2008 to 2015 ongoing and on schedule	GoK/ World Bank Total cost USD 67 Million (KES 6 Billion) out of IDA Credit
3	Kenya Agricultural Productivity and Sustainable Land Management Project (KAPSLM)	9 Counties	To facilitate agricultural producers and other natural resource users to adopt environmentally-sound land management practices without reducing their incomes.	2010 to 2015 ongoing and on schedule	USD 10M GEF Grant through the World Bank
4	Kenya Adaptation to Climate Change in Arid and Semi-Arid Lands (KACCAL)	4 Counties in ASALs	To enhance the resilience of communities and the sustainability of rural livelihoods threatened by climate change in the ASALs	2012 to 2016 Project is new launched in 2014.	USD 5.5M GEF Grant through the World Bank

S/No	Name	Scope	Objective	Period and Status	Cost/ source of Funds
5	National Accelerated Agricultural Inputs Access Project (NAAIAP)	41 Counties	To improve inputs (seed and fertilizers) access and affordability for targeted 1.8 million resource poor farmers.	Started in 2007 implemented every FY ongoing and on schedule	GoK funded based on current FY 2014/2015 FY KES 47Million was allocated
6	Njaa Marufuku Kenya (NMK)	National (47 Counties)	To contribute to reduction of poverty, hunger and food insecurity among poor and vulnerable communities in Kenya	2006 to 2015. ongoing and on schedule	GoK funded started in 2006/2007 with an annual allocation of about KES 200M giving a total of KES 1.7 Billion to date
7	Eastern Africa Agricultural Productivity Project (EAAPP)	24 Counties	To increase agricultural productivity and competitiveness of agriculture sector, increase farm incomes, reduce poverty and improve food security in Eastern Africa	2009 to 2015. ongoing and on schedule	GoK / World Bank Total cost USD 30M (KES 2.4 Billion)
8	Small-scale Horticulture Development Project (SHDP)	8 Counties-9 Irrigation Schemes	To contribute to poverty reduction and enhance food security.	2008 to 2015. ongoing and on schedule	GoK/ AfDB Total cost KES 2.075 Billion
9	Drought Resilience and Sustainable Livelihoods Project (DRSLP)	6 Counties:	To enhance drought resilience and improve sustainable livelihoods of communities in ASALs of Kenya.	2013 to 2018. ongoing and on schedule	GoK/ AfDB Total cost: KES 4.9 Billion loan from AfDB, KES 575.5 Million from GoK
10	Smallholder Horticulture Empowerment & Promotion Unit Project (SHEP UP)	33 Counties:	To improve the livelihood of smallholder horticulture farmers	2010 to 2015	GoK/ JICA Total cost KShs 373 Million
11	Smallholder Horticulture Empowerment Promotion Project for Local and Up scaling (SHEP PLUS)	18 Counties	To increase number of horticulture smallholders applying the SHEP Approach and improve their livelihood	2015 to 2020 design and planning for next phase complete	GoK/JICA Estimated cost KES 300Million
12	Smallholder Horticulture Marketing Programme (SHoMAP)	7 Counties	To increase domestic horticulture productivity and improve the produce and input marketing system.	2007 to 2015 completed in December 2014 and ending in June 2015	GoK/ IFAD Total cost of KES 2.3 Billion

S/No	Name	Scope	Objective	Period and Status	Cost/ source of Funds
13	Kenya Census of Agriculture- KCA	Pilot census-6 Counties Main census -47 Counties	To conduct the first agricultural census in Kenya	2014 to 2017. on schedule Preparatory phase complete Pilot census in August 2015 Main census in 2016 after Cabinet approval	GoK/ World Bank, Finland Embassy and FAO Estimated cost. KES 11Billion
14	Rice-based Marketing Agriculture Promotion Project (RICEMAPP)	1 County Kirinyaga	To establish, disseminate and promote adoption of the Market-oriented Approach in Mwea Irrigation Scheme and other Schemes	2012 to 2017. ongoing and on schedule	GoK/JICA KES 77.355 Million from JICA and KES 101.6 Million from GoK, total KES 179 Million
15	Traditional High Value Crops Programme (THVC)	31 Counties in ASAL areas	To Increase productivity by facilitating access to affordable quality inputs and services for food and nutrition security, diversification, To reduce the gap between consumption and production	Started in 2006 and is implemented every financial year. ongoing and on schedule	GoK funded Total amount received since 2006 to date is KES 1.35 Billion
16	Project for Enhancing Gender Responsive Extension Services (PEGRES)	3 Counties:	To improve the livelihoods of smallholder female and male farmers, pastoralists and fisher folks.	2014 to 2017 ongoing and on schedule	GoK and JICA. GoK KES.21, 608,000 JICA KES. 273,832,000 Total cost KES. 295,440,000
17	Youth in Modern Agriculture Project (YMAP)	5 Counties:	To increase youth participation in horticultural production, agribusiness and agro-processing	Started in the FY 2012/ 2013 and is implemented every FY ongoing and on schedule	GoK funded KES 60 Million in 2012/2013FY, KES 58 Million in 2013/2014FY, KES 30 Million in 2014/2015 FY Total cost to date KES 118 Million

S/No	Name	Scope	Objective	Period and Status	Cost/ source of Funds
18	Urban and Peri-urban Agriculture Project (UPAP)	3 Counties	To increased employment and income generating opportunities for youth and women through urban agriculture, livestock and fisheries businesses	Started in 2013 Implemented every FY Currently being implemented only in Nairobi County. Ongoing and on schedule	GoK funded Total cost KES 36 Million
19	Kenya Cereal Enhancement Project and Kenya Climate Resilient Agricultural Livelihoods Project- KCEP -CRAL	15 Counties	To contribute to the reduction of rural poverty and food insecurity of smallholder farmers in the ASALs by support to tap into the economic potential of targeted value chains	2015 to 2021. on schedule negotiations ongoing	GoK/EU/ IFAD/ FAO Total cost KES 13.3 Billion
20	Strengthening Fertilizer Quality and Regulatory Standards in Kenya	National-47 Counties	To contribute to food security through enhanced fertilizer quality and regulatory standards	2015 to 2017. on schedule	KES 41 Million

9.3 State Department of Fisheries

The State Departments of Fisheries continues to implement a number of programmes and projects geared towards achieving sustainable fisheries management and development, research, value addition and meeting international obligations. Some of the projects started over the review period (Table 9.2).

Table 9.2: State Department of Fisheries Projects

S/No	Name	Scope	Objective	Period and Status	Cost/ source of Funds
1	Aquaculture Mini Processing Plants	4 Counties; Kakamega, Meru, Migori and Nyeri	To reduce post-harvest losses and promote marketing along the value chain	2011/12 to 2015 Complete in 3 Counties ongoing in 1 Migori county	235 M/ GoK
2	Offshore Patrol Vessel	Kenya EEZ	To conduct surveillance and inspection of fishing vessels in the exclusive economic	2011-17 FY	3.5 B/ GoK
3	National Fish Quality Laboratories	1 County; Nairobi City County	To build capacity for national fish testing for improved market	2012 - 16	7 0 0 M / 5 6 M GoK and Spain Government 644M

S/No	Name	Scope	Objective	Period and Status	Cost/ source of Funds
4	MCS Center	1 County; Mombasa County	To facilitate fisheries surveillance in Kenya EEZ	2014 - 17	43 M / GoK
5	Marine and Ocean Service Centre	KMFRI	To facilitate marine fisheries research	2009 - 15	226M/ GoK
6	Kenya Coastal Development Project (KCDP)	5 Coastal Counties; Mombasa, Kwale, Kilifi, Tana River and Lamu	To promote environmentally sustainable management of Kenya's coastal and marine resources.	2010 - 16	3.5 B/ GoK 350M and IDA & GEF 3.15B

9.5 State Department of Livestock

The State Departments of Livestock targets development of the livestock sub sector through support to the various livestock enterprises which include: cattle, poultry, sheep and goats, rabbits, apiculture, pigs, camels and emerging livestock. Livestock programmes and projects are aimed at supporting pastoralists in the ASALs and dairy farmers in high rainfall areas.

Table 9.3: Programmes/Projects under the State Department of Livestock

S/No.	Name	Scope	Objective	Period and Status	Cost /Source of Funds
1	Smallholder Dairy Commercialization Project	9 Counties (Nakuru, Bomet, Nandi, Uasin-Gishu, Transzoia, Bungoma, Nyamira, Kisii)	To increase the incomes of poor rural households that depend substantially on production and trade in dairy products for their livelihoods.	2006 - 15 On-going	GoK (5%) IFAD (95%) -Grants/Loans
2	Regional Pastoral Livelihoods Resilience Project	All ASAL Counties	To enhance drought resilience of pastoralists and agro-pastoralists in drought prone areas.	2014-2009 (On-going)	World Bank - US\$75 million
3	Mainstreaming Sustainable Land Management in Agro-pastoral Production Systems of Kenya (SLM)	4 Counties; Embu Garissa Kitui Narok	To provide a basis for economic development, food security and sustainable livelihoods while restoring ecological integrity	2010-2015 (On-going)	GEF (US\$ 3,030,734) UNDP (US\$ 1,000,000) GOK (US\$ 3,660,000) Others (US\$4,000,000): parallel initiatives Total: US\$ 11,690,734)

S/No.	Name	Scope	Objective	Period and Status	Cost /Source of Funds
4	Establishment of Coast Disease Free Zone	Counties of Kwale, Mombasa, Kilifi, Taita-Taveta, Tana River and Lamu.	To increase market access for animal and animal products	On-going	GoK Ksh 3 billion
