## FOREWORD

Ever since its establishment, FAO has been the provider of global assessments and analysis of the current food and agricultural situation to the international community. In order to respond to the increasing and more diversified demand for information, FAO continues to collect process and disseminate timely and relevant information and basic data series on food and agriculture.

Every two years, FAO organizes, for the benefit of the member countries, meetings for regional commissions on agricultural statistics. Senior agricultural statisticians are invited to these meetings to discuss issues related to the development of agricultural statistics systems. In Africa, they meet biannually in the framework of the “African Commission on Agricultural Statistics (AFCAS).

Until the 17th Session of AFCAS in 2001, member countries had been presenting statements on the current status of their agricultural statistics systems. In order to make these presentations more relevant and focused, and under the initiative of Mr. Haluk Kasnakoglu, Former Director of the FAO Statistics Division, it was decided, starting with the 18th AFCAS in 2003, to request participants to provide relevant information on the infrastructure and organization of the Agricultural Statistics Systems in their respective countries, the resources used and the output produced, as well as specific information on relevant issues following a standardized questionnaire.

Mr. Naman Keita, FAO Senior Regional Statistician for Africa at the time, contributed significantly to the implementation of this initiative which was highly appreciated by countries. He was assisted in this exercise by two international consultants, Mr. Oladejo Oyeleke Ajayi and Mr. Harouna Soumare. Support was also provided by colleagues in the FAO Statistics Division, namely Mr. Hiek Som, Mr. Narain Pratap, Mr. François Fonteneau, Mr. Gong Xiaoning, and others.

However, because a substantial number of countries were not providing reports on a timely manner, results had a limited coverage. But the 2007 survey was a success because of a surge in the number of the reports received. Thus, it was possible to have a relatively complete database for the continent as a whole.

The present document was produced on the basis of the 2007 survey. It provides the most comprehensive and up to date information on the organization and outputs of the food and agricultural statistics systems in AFCAS member countries.

The purpose of this report is to highlight the strengths and weaknesses in the national agricultural statistics systems which could be useful in designing cooperation programmes in this area. It is also intended to serve as an advocacy tool for the development of national agricultural statistics systems in Africa.

This survey cycle was conducted by the statistical unit of the FAO Regional Office for Africa, under the supervision of Mr. Vincent Ngendakumana, the Regional Statistician, assisted by a national consultant, Mrs. Estella Mensah. The report has been reviewed by, and has benefited valuable contributions from other colleagues in the Statistics Division at Headquarters in Rome, especially Mr. Naman Keita, Senior Statistician and Mr. Gong Xiaoning, Statistician. We are also grateful to all African countries in general and to the FAO Statistics Division for their cooperation in the successful implementation of this activity.

This report may contain some weaknesses. We would therefore appreciate receiving any opinions, observations and/or comments for the improvement of future similar editions. These reactions can be sent to the following address: [Vincent.Ngendakumana@fao.org](mailto:Vincent.Ngendakumana@fao.org).

It is hoped that this document will be useful not only to professional statisticians but also to the general public and to all those who would like to simply have a first hand access to basic information on the agriculture sector of African countries.

Edouard K. Tapsoba

Officer-in-Charge  
FAO Regional Office for Africa (RAF)  
Accra, Ghana  
December 2008

## ABSTRACT

The State of Food and Agricultural Statistical Systems in Africa is the result of a survey which highlights areas of strengths and weaknesses (such as the availability of sustainable professional staff, the system of effective dialogue between data producers and users) in national agricultural statistical systems and could be useful in designing cooperation programmes (between countries or with international agencies) and constitute an advocacy tool for funding the development of agriculture statistical system in Africa. This report is based on the data collected from African countries in the year 2007 during the preparation for the 20th AFCAS. It is responding to one of the major recommendations made by that meeting.

Most important information related to food and agricultural statistics systems was taken from African countries. The survey reveals that about 70% of countries in Africa have legal framework for agricultural statistical activities. It also reveals that only 47% of them have an official forum for dialogue between agricultural statistics producers and users. Even in the case of dialogue, it has been observed that these meetings with data users are generally conducted on ad-hoc basis.

Meanwhile, it has also been discovered that few professional staff are trained and recruited in African countries and that just as few countries have staff trained abroad.

The budget allocation to agricultural statistical activities is highly variable from one country to another. It goes from US\$441 000 (average by country in West Africa) to US\$1 307 000 (average by country in North Africa), with an overall average for all Africa of US\$658 000 per country. It is important to note that some countries could not provide information on financial resources in the agricultural sector since there is no budget allocation for agricultural activities in the country. Others have stated that budget is allocated on lump sum basis from government treasury to the ministries for all normative activities. Therefore, there is no specific budget allocated for activities on agricultural statistics.

There is a small proportion (16.3%) of countries in Africa that has partnership with external statistical institutions. Countries are generally establishing international cooperation and obtaining external assistance when it comes to the implementation of important statistical projects such as agricultural censuses.

In terms of the use of international classifications, it has been observed that the HS and ISIC are the most adopted ones by African countries (55.2% of countries). Regional classifications (SADC, AOAF, AFRISTAT, etc.) are not commonly patronized in (74.1%) of countries. Moreover, only 30% of countries use the Central Product Classification (CPC).

84.4% and 57.9% of countries are respectively compiling Agricultural GDP and Economic Accounts for Agriculture.

The use of information technology is also increasing in almost all countries in Africa.

Further, thanks to external technical and financial support, agricultural census has been conducted at least once in about 8 out of every 10 countries. Data produced are generally made available to users. 63.4% of countries have a plan to conduct an agricultural census in the next three years. 91.5% of countries have conducted at least one crop production survey. However, only 63.6% of countries have conducted at least one livestock production survey.

## CHAPTER 1

### INTRODUCTION AND BACKGROUND

#### **1.1. Introduction**

This report has been prepared on the basis of the questionnaire which is on “The State of Food and Agricultural Statistical Systems in Africa”. It highlights areas of strengths and weaknesses in national agricultural statistical systems and could be useful in designing cooperation programmes (between countries or with international agencies) and constitute an advocacy tool for funding the development of agriculture statistical system in Africa.

This report is made up of two parts as in the questionnaire. The first part deals with the organization of the food and agricultural statistical systems which comprises legal framework, structures of the national statistical system, strategic framework, dialogue with data users, financial resources, human resources and international cooperation and external assistance. The second part provides information on the outputs of the food and agricultural statistical systems which also comprises the adoption of international classifications, main censuses and surveys conducted, availability and coverage of agricultural statistics, availability of other statistics and indicators, national account statistics, information technology, details on the main national food and agricultural censuses and surveys, main administrative sources on food and agricultural statistical information. These features are considered to have a significant bearing on the state of food and agriculture statistical systems in Africa. A set of questionnaires from 49 countries of the continent is cross-examined in this report.

#### **1.2. Background on the survey**

Until the 17th Session of African Commission on Agricultural Statistics (AFCAS) in 2001 (held in Pretoria, South Africa), member countries participating in AFCAS biannual sessions were requested to present a statement on the current status of their agricultural statistical systems, under the agenda item called “*Present state of Food and Agricultural Statistics in the Countries of the Region: Country Statements*”. In order to make these presentations more relevant and focused, it has been decided, starting with the 18th AFCAS Session in 2003 (held in Yaoundé, Cameroon), to request delegates to provide relevant information on the infrastructure and organization of the Agricultural Statistics Systems in their country, the resources and the output as well as specific information on relevant issues through a standardized questionnaire. The first questionnaire was therefore designed to this effect and sent to countries in 2003, just before the 18<sup>th</sup> AFCAS Session. The second round of this questionnaire was also sent in 2005, before the 19th AFCAS Session held in Maputo, Mozambique. Out of the 51 African countries, 31 responses (60.1%) were recorded timely and a preliminary summary was presented during that Session, which was highly appreciated by the delegates. Following the recommendation of that meeting, 4 additional countries have responded to the 2005 questionnaire, making a total of 35 responses. For the 20<sup>th</sup> AFCAS Session held in Algiers, Algeria (in 2007), the questionnaire was updated and again administered to African countries. 40 countries (78.4%) responded before the meeting. Partial results have been presented at that session. Considering the strong willingness of having a more comprehensive report, it had been recommended to provide countries with more time so that missing data could be provided and the final report produced and published. By the end of this time extension additional 9 countries responded to the questionnaire making a total of 49 (96%) responses.

## CHAPTER 2

### METHODOLOGY AND CONSTRAINTS

#### **2.1: Methodology**

The structure of the questionnaire was reviewed so as to make it easier to be completed by respondents. This was done to also maintain the most important variables in relation to the objectives of the survey. The questionnaire was addressed to FAO contacts for agricultural statistics but filled in by any other concerned stakeholders (see the table A 26 for respondents' details). Follow up was made to ensure completeness of the required information or data. The completed questionnaires were cross-examined to check the validity of the data provided by countries before capturing them into the system. Software for data input, data checking, data processing, tabulation and data analysis was also considered to produce valid data for consumption. The section for financial resources was particularly updated to have uniformity in the data.

With respect to data processing tools, Epi-data software was used to capture the data which provided the necessary checks and value labels. SPSS software was used mainly for the analysis whilst MS-Excel was used in the graphical analysis.

#### **2.2: Constraints**

The follow-up and monitoring of timely responses from countries was quite challenging. Some countries did not reply within the stipulated deadline. For others, some portions of the questionnaire (especially those requiring more attention and interaction with other institutions) were not well completed. For example, relevant cases, especially those related to budget, human resources and number of computers in use by countries were missing. This has affected detailed analysis of respective information (interesting related indicators cannot be generated on non-comprehensive coverage). Lots of pressure was therefore exerted on the countries to respond timely, exhaustively and in a consistent manner to all questions.

In some cases, the questionnaire was filled in by more than one respondent whilst in some other cases, separate completed questionnaires were received which came from two sources with different information.

## CHAPTER 3

### REPORTING STATUS

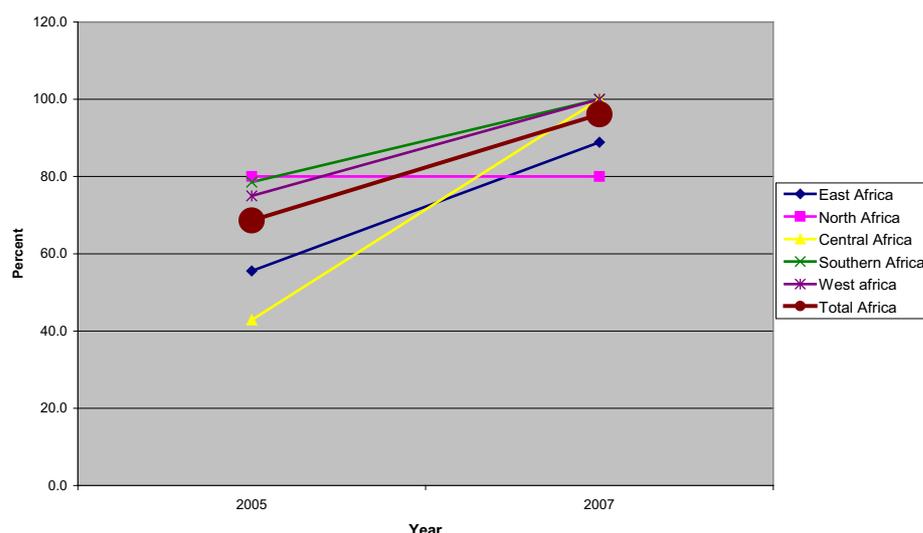

Fifty-one<sup>1</sup> countries in the African continent were assigned the questionnaire; out of that, 40 (78.4%) of them responded to the questionnaire before the 20<sup>th</sup> AFCAS session. In comparison with 2005 survey, with 31 (60.1%) timely reporters, there has been an increase in response rate of about 18%.

After the AFCAS meeting, a follow-up was mounted on the remaining countries that could not respond to the questionnaire before the meeting. Questionnaires with inconsistent information as well as those with missing cases were retained to their respective countries to be completed. This action was taken based upon strong recommendations made at the meeting.

After this exercise, 9 more countries responded to the questionnaire making a total of 49 (96%)<sup>2</sup>, with the exception of Djibouti and Libya. Almost all countries with missing and inconsistent cases reacted to the survey. A more intensive checking was done before proceeding to the analysis.

Chart 3.1 shows that there is a general increase in the response to the questionnaire throughout the sub-regional zones from 2005 to 2007 except in the Northern Africa region where there is no change in participation in the survey (only Libya has not been reporting). In East Africa, Djibouti is another country which has not been reporting. In 2007, the maximum record has been therefore registered with Central, Southern and West Africa where all countries had responded to the questionnaire as compared to 2005. Obviously, there is a significant increase in response from below 50% to 100% in those regions of the continent as shown in the Table A1b in the annex.

**Chart 3.1. Country response to questionnaires for AFCAS by sub-regional zones**

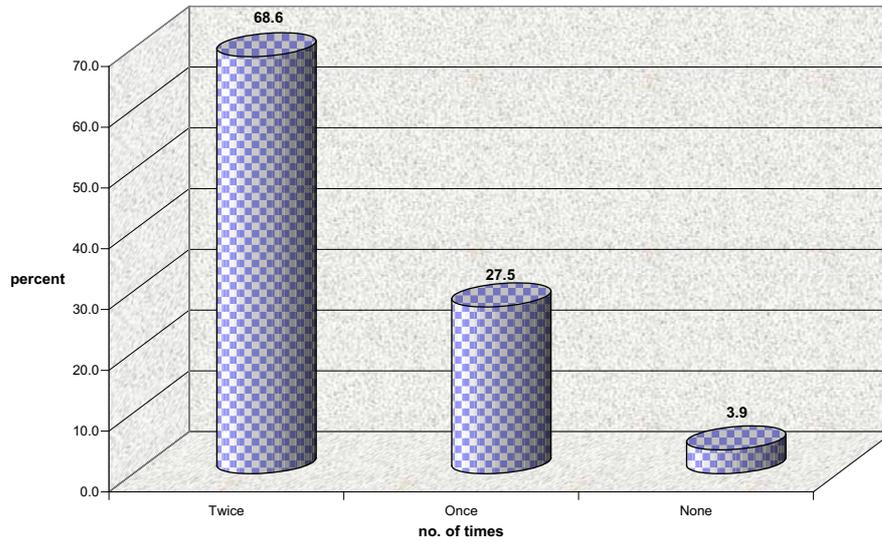

<sup>1</sup> Excluded Somalia and Equatorial Guinea

<sup>2</sup> Due to this high level of response rate, the analysis of this report is mainly focusing on 2007 data.

According to Chart 3.2 and Table A2 in annex 1, reporting status has been sustainable in 35 (68.6%) countries. A total of 14 (27.5%) countries have reported just once for the two rounds of the surveys exclusively in 2007 and only 2 (4%) countries have never reported.

Chart 3.2. Country response to AFCAS questionnaires in both 2005 and 2007

## CHAPTER 4

### FINDINGS

This chapter has two sections. Section one considers the organization of the food and agricultural statistical system whilst section two deals with the outputs of the food and agricultural statistical system in Africa.

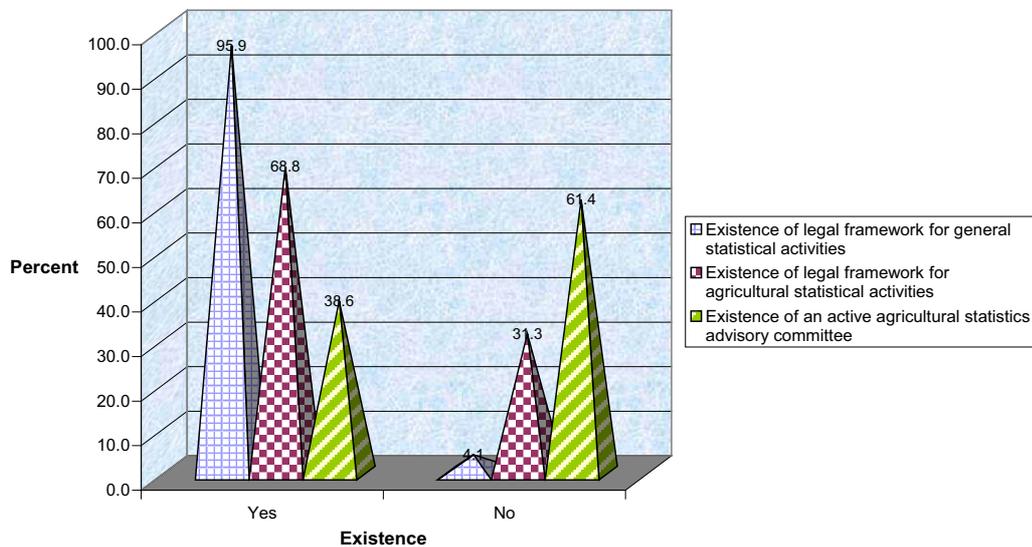

#### 4.1. The organization of the Food and Agricultural Statistical System

##### 4.1.1. Legal framework of statistical activities

The legal framework plays a vital role in the organization of every system including the food and agricultural statistical system. Its very existence protects the integrity of the system. So countries were inquired to indicate whether it was in existence in their respective countries.

Chart 4.1 indicates that most countries have a legal framework for general (95.9%) and agricultural (68.8%) statistical activities in Africa but very few (38.6%) countries have an active Agricultural Statistics Advisory committee. (See the Table A3 in annex 1 for detailed figures).

Chart 4.1: Legal framework of statistical activity - 2007

A further analysis was also conducted on the issue of active agricultural statistics Advisory Committee and it has been realized according to the Table 4.1 that out of 29 countries who responded to the question, the existence of legal framework for agricultural statistical activities only, 13 (44.8%) have also established an active agricultural statistics advisory committee. There are cases where the Committee exists without a legal framework (23.5%) and where the legal framework exists without the Advisory Committee (55.2%).

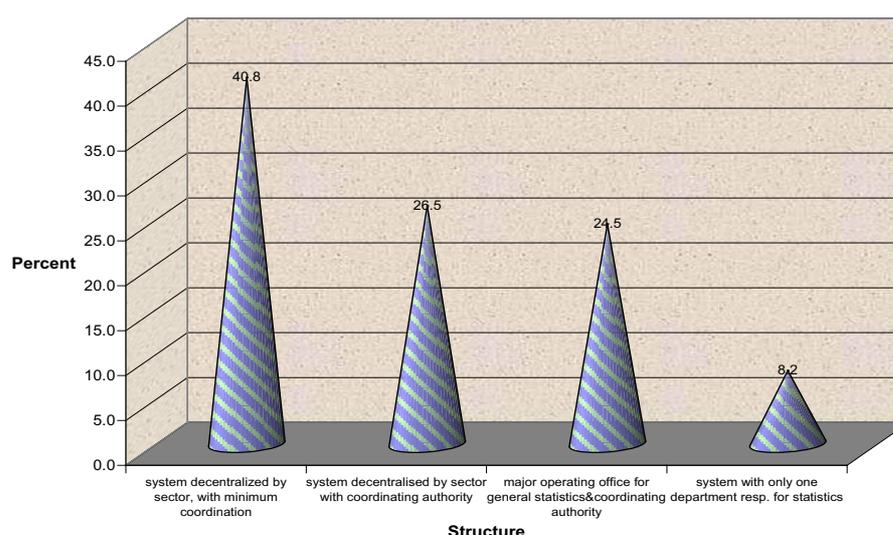

**Table 4.1: Relationship between the existence of legal framework for agricultural statistical activities and the Existence of an active agricultural statistics advisory committee – 2007**

|  |     | Existence of an active agricultural statistics advisory committee |        |        |
|--|-----|---|--------|--------|
|  |     | Yes   | No     | Total  |
| Existence of legal framework for agricultural statistical activities | Yes | 13  | 16     | 29     |
|  |     | 44.8%   | 55.2%  | 100.0% |
|  |     | 76.5%   | 59.3%  | 65.9%  |
| No   | No  | 4   | 11     | 15     |
|  |     | 26.7%   | 73.3%  | 100.0% |
|  |     | 23.5%   | 40.7%  | 34.1%  |
| Total  |     | 17  | 27     | 44     |
|  |     | 38.6%   | 61.4%  | 100.0% |
|  |     | 100.0%  | 100.0% | 100.0% |

#### **4.1.2. Structure of the National Statistical System**

The structure of a system is generally one of the key indicators of the organization of a system. The structure determines the type of coordination done by authorities which in the case of food and agriculture statistics affects the states of performances. Assessing the structure of national statistical system in Africa, it has been observed, according to the Chart 4.2, that the statistical system decentralized by sector is mainly practiced by countries (40.8%) whilst a statistical system with only one department responsible for statistics is practiced by few countries (8.2%) in the region. (See Table A4 in annex 1 for detailed figures).

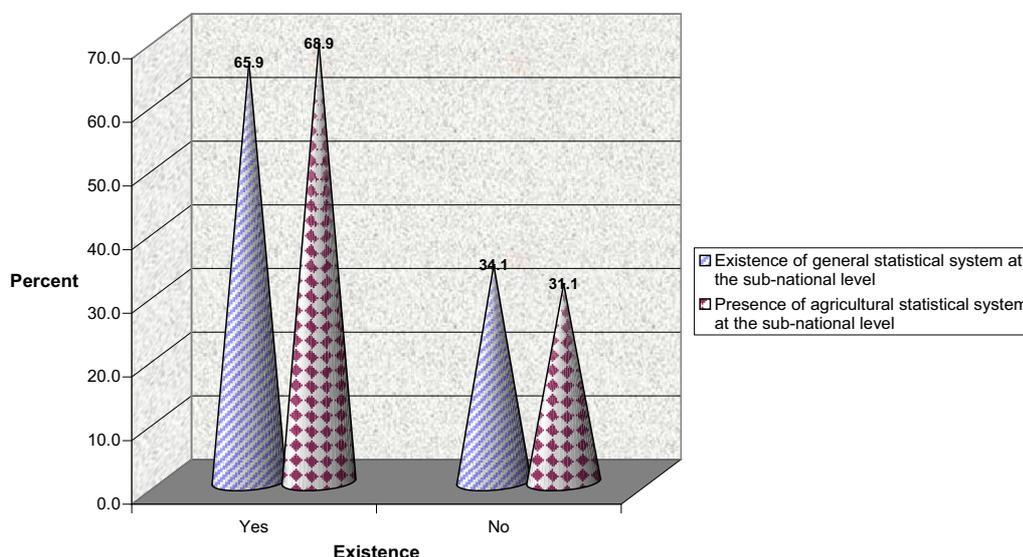

**Chart 4.2: Structure of the general statistical system in countries - 2007**

At the sub-national level, it had been observed that the general statistical system is present in majority (65.9%) of the countries in Africa. However, an equally high proportion (68.9%) of

countries has agricultural statistical system also at the sub-national level as shown in Chart 4.3. (See also the Table A5 in annex 1 for more details).

**Chart 4.3: General and Agricultural statistical system at sub-national level - 2007**

The Table 4.2 illustrates that a high proportion of countries (78.3%) in the African continent have their agricultural statistics being produced by their respective agricultural statistical offices.

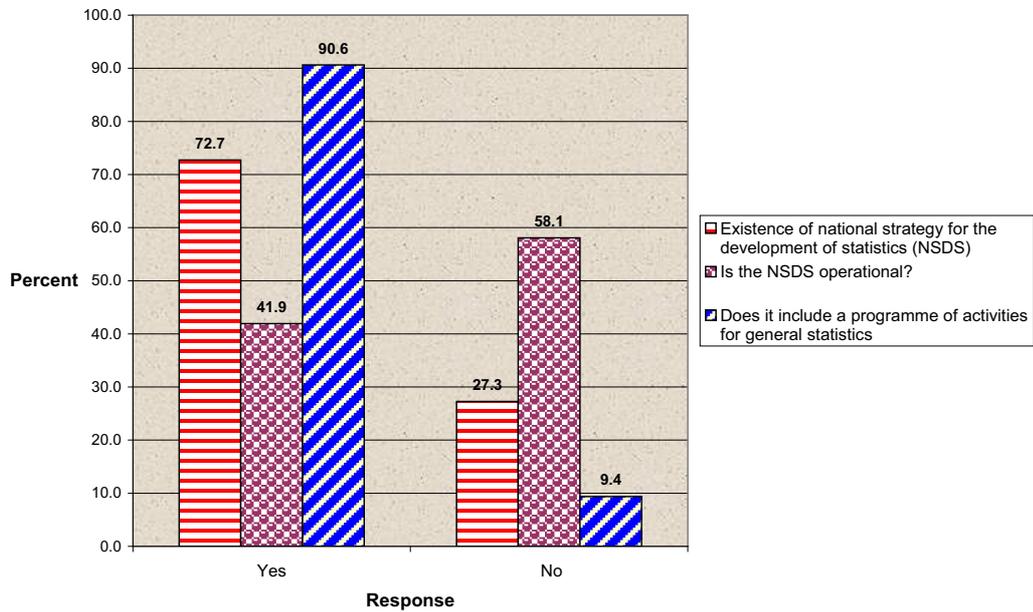

**Table 4.2: Most important national institution involved in the production of agricultural census – 2007**

| Institution                     | Frequency | Percent |
|---------------------------------|-----------|---------|
| National Statistical Office     | 19        | 40.4    |
| Agricultural Statistical Office | 37        | 78.7    |
| others                          | 4         | 8.5     |
| Total                           | 47        | 100.0   |

### **4.1.3. Strategic framework**

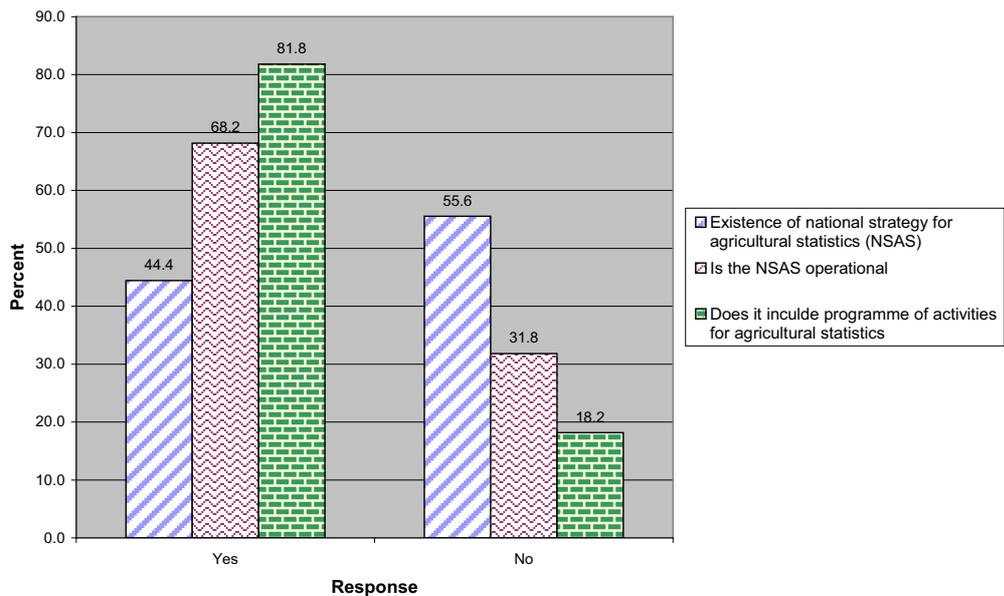

Strategic framework also influences to some extent the state of food and agricultural statistical systems. It determines the appropriate means for the development of agricultural statistics. In view of this, countries were asked about the existence and operability of the National Strategy for the Development of Statistics (NSDS). According to the Chart 4.4, it has been identified that the NSDS is in existence in a large proportion of countries (72.7%) in the African region. However, they are operational in only 41.9% of the countries. (See Table A6 in annex 1 for detailed data).

**Chart 4.4: National Strategy for the Development of Statistics (NSDS) - 2007**

In the case of National Strategy for Agricultural Statistics (NSAS), the Chart 4.5 indicates that it is in existence in 44.4% of the countries in Africa. However, in most cases they are operational (68.2%). From countries which responded to this question 81.8% have also included programme of activities for agricultural statistics in their national strategy for agricultural statistics. (See the Table A7 in annex 1 for detailed data).

**Chart 4.5: National Strategy for Agricultural Statistics (NSAS) - 2007**

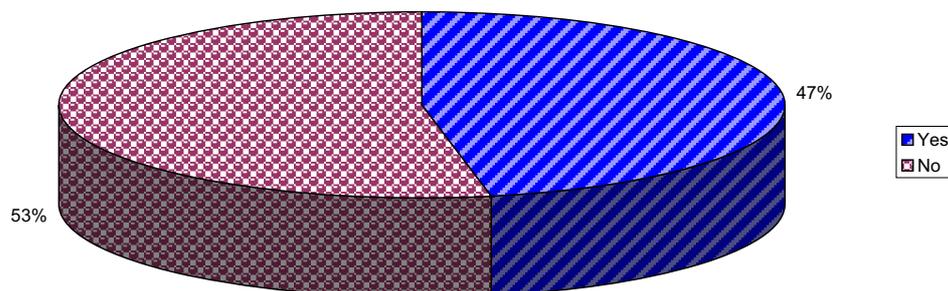

#### **4.1.4. Dialogue with data users**

The official forum for dialogue between producers and users of agricultural statistics is a very essential tool in identifying the relevance of information provided to users and a means to improve upon weaknesses associated with the production of statistics. At such dialogues, needs are met and waste is reduced on both sides thus producers and users. Countries were therefore asked to give their views on how often such dialogues are made with a selected number of organizations such as state planning organizations, representatives of academic environments, media, chamber of commerce, central bank, treasury or ministry of finance, private sector representatives and socio-professional representatives in their respective countries. They were specifically asked about the existence of user-producer fora and whether they meet on regular basis or ad-hoc basis.

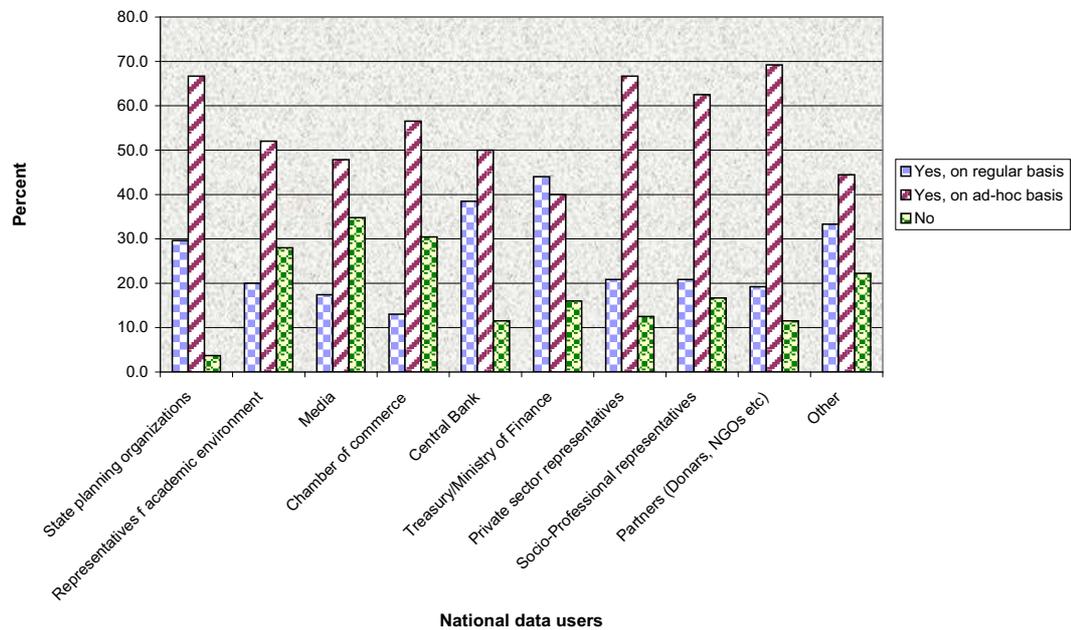

According to the Chart 4.6, 53% of African countries do not have such official forum for dialogue between agricultural statistics producers and users. (See the Table A8 in annex 1 for more details).

**Chart 4.6: Existence of an official forum for dialogue between agricultural statistics producers and users - 2007**

Even in the case of dialogue, it has been expressed by most concerned African countries that these meetings with data users are generally conducted on ad-hoc basis. (See the Chart 4.7 below and the Table A9 in annex 1 for more details).

**Chart 4.7: Dialogue with national data users - 2007**

It has been further analyzed and discovered that important and useful agricultural data sources are made available to users without forum for dialogue. For example, the Table 4.3 below shows that among 34 countries which have made available their agricultural census results to users, 52.9% of them do not have an official forum for dialogue with users.

**Table 4.3: Existence of an official forum for dialogue between agricultural statistics producers and users and the accessibility of results by users - 2007**

|   |     | Are the agricultural census results available to users |        |        |
|---|-----|--|--------|--------|
|   |     | Yes  | No     | Total  |
| Existence of an official forum for dialogue between agricultural statistics producers and users | Yes | 16   | 3      | 19     |
|   |     | 84.2%  | 15.8%  | 100.0% |
|   | No  | 47.1%  | 50.0%  | 47.5%  |
|   |     | 18   | 3      | 21     |
|   |     | 85.7%  | 14.3%  | 100.0% |
|   |     | 52.9%  | 50.0%  | 52.5%  |
| Total   |     | 34   | 6      | 40     |
|   |     | 85.0%  | 15.0%  | 100.0% |
|   |     | 100.0%   | 100.0% | 100.0% |

#### **4.1.5. Financial resources**

In 2007, according to countries which responded to the question related to the annual budget allocated to agricultural statistical activities, an average of US\$657 778 is used by countries for that activity (the minimum and maximum average values recorded were US\$440 977 in West Africa and US\$1 307 000 in North Africa respectively) as shown in the Table 4.4<sup>3</sup>.

Some countries could not provide information on financial resources in the agricultural sector since there is no budget allocation for agricultural activities in the country. Others have stated that budget is allocated on lump sum basis from government treasury to the ministries for all normative activities. Therefore, there is no specific budget allocated for activities on agricultural statistics.

**Table 4.4: Level of financial resources (averages in USD) - 2007**

| <b>Sub-regions</b>    | <b>Latest annual budget estimates for agric. Stats activities</b> | <b>Annual regular budget for staff working on agric. Stats.</b> | <b>Annual budget for non-staff working on agric. Stats.</b> | <b>Total annual external funding</b> | <b>Budget for regular training</b> |
|-----------------------|---|---|---|--------------------------------------|------------------------------------|
| North Africa          | 1 307 000   | 1 006 274   |   |                                      | 10 021                             |
| West Africa           | 440 977   | 170 688   | 3 961 936   | 1 121 038                            | 31 709                             |
| Central Africa        | 701 066   | 107 455   | 25 038  |                                      | 20 865                             |
| East Africa           | 697 286   | 847 279   | 224 422   | 300 000                              | 24 753                             |
| Southern Africa       | 659 709   | 319 059   | 679 090   | 1 462 549                            | 50 724                             |
| <b>Average Africa</b> | <b>657 778</b>  | <b>388 209</b>  | <b>894 022</b>  | <b>1 098 035</b>                     | <b>30 818</b>                      |

In 2005, only 16 countries (not necessarily the same as in 2007) responded to the same questions. This fact makes it difficult to make any comparative analysis of the two periods (2005 and 2007) on this important information.

#### **4.1.6. Human resources**

The number of professional and support staff in the various headquarters of the countries was also considered in the surveys. As shown in the Table 4.5, it is estimated that the average number of professionals at the headquarters seems to be very low and quite stable from 2005 to 2007 (average of 11 and 12 staff at HQ are professionals respectively), while that of the number of support staff by country decreased from 26 to 13 staff. In the regional/local offices, the average number of professional staff seems to be higher with an average of 43 in 2005 and 35 in 2007. However, the support staff number in regional offices has not been stable either. There was a sudden fall from an average of 287 in 2005 to 66 in 2007. This was as a result of high figures recorded by Ethiopia and Kenya in East Africa during the 2005 AFCAS survey. The high figures recorded by Ethiopia can be linked to a household budget survey conducted in 2004. In case of Kenya, the data included staff at the central bureau of statistics, ministry of agriculture, livestock and fisheries department. They have also conducted Kenya integrated household budget survey in 2005/2006. It may therefore be possible that the figures also include temporary support staff.

<sup>3</sup> The conversion of national currencies was done using the 2007 annual exchange rates from IMF.

**Table 4.5: Level of human resources (2005 - 2007)**

| Country         | Average no. of Prof. Staff in the HQ |      | Average no. of Prof. staff in the regional/local office |      | Average no. of support staff in the HQ |      | Average no. of support staff in the regional/local offices |      |
|-----------------|--------------------------------------|------|---|------|--|------|--|------|
|                 | 2005                                 | 2007 | 2005  | 2007 | 2005                                   | 2007 | 2005   | 2007 |
|                 | North Africa                         | 6    | 9   | 118  | 123                                    | 5    | 21   | 38   |
| West Africa     | 10                                   | 12   | 22  | 32   | 11                                     | 9    | 3  | 25   |
| Central Africa  | 14                                   | 13   | 8   | 36   | 7                                      | 8    | 14   | 8    |
| East Africa     | 29                                   | 23   | 151   | 37   | 120                                    | 28   | 1 779  | 120  |
| Southern Africa | 5                                    | 5    | 0   | 10   | 14                                     | 10   | 83   | 84   |
| Total Africa    | 11                                   | 12   | 43  | 35   | 26                                     | 13   | 287  | 66   |

The existence of regular training program for the staff was also inquired of the countries. It has been realized, according to the Table 4.6, that only about 35% of countries had regular training for their staff as at 2007, with an average budget of about US\$30 818. (See the Table 4.4 above).

**Table 4.6: Existence of a regular training program for staff – 2007**

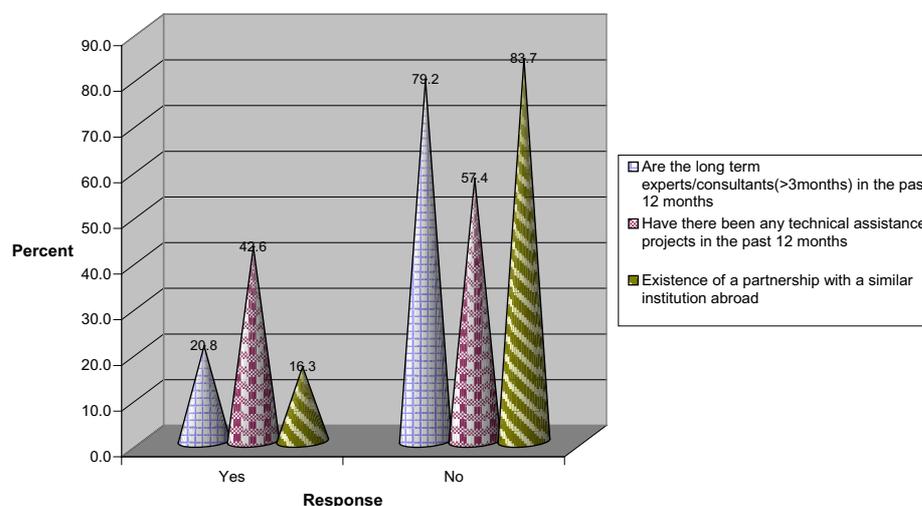

| Existence of a regular training program for staff | Frequency | Percent |
|---|-----------|---------|
| Yes   | 17        | 34.7    |
| No  | 32        | 65.3    |
| Total   | 49        | 100.0   |

#### **4.1.7. International cooperation and external assistance**

The knowledge about international cooperation and external assistance is a very vital advantage when looking for support in development of food and agricultural statistics. Indeed, there are many African countries that have little or no support at all for their statistical activities. Countries were requested to provide information on whether there have been long term experts or consultants, technical assistance projects and existence of partnership with similar statistical institutions abroad.

It has been discovered from the Chart 4.8 that very few (20.8%) countries have had long term experts at their post during the past 12 months (with an average of about 4 experts per country). Also, there are few countries (42.6%) that have had technical assistance during the same period. Meanwhile there is a small proportion (16.3%) of countries in Africa that had partnership with similar statistical institutions abroad. (See the Table A10 in annex1 for detailed figures).

**Chart 4.8: International cooperation and external assistance - 2007**

Out of a total of 10 countries that have had long term experts or consultants, 70% of them are provided with technical assistance projects in the past twelve months as shown in the below Table 4.7.

**Table 4.7: Relationship between the use of long term experts/consultants (>3months) and the presence of technical assistance projects months - 2007**

|   |     | Have there been any technical assistance projects in the past 12 months |       |        |
|---|-----|---|-------|--------|
|   |     | Yes   | No    | Total  |
| Are the long term experts/consultants(>3months) in the past 12 months | Yes | 7   | 3     | 10     |
|   |     | 70.0%   | 30.0% | 100.0% |
|   | No  | 13  | 24    | 37     |
|   |     | 35.1%   | 64.9% | 100.0% |
| Total   |     | 20  | 27    | 47     |
|   |     | 42.6%   | 57.4% | 100.0% |

Considering the project undertaken in African countries, a few countries (about 40% of the countries that responded) were able to provide such information. It has been indicated that FAO and EU are the main partners and/or donors that supported most of their projects. (See the Table 4.8 below).

**Table 4.8: Projects under international cooperation and external assistance (2007)**

| Country              | Title of project                                      | Partner/donor             |
|----------------------|---|---------------------------|
| Algeria              | MEDSTAT II  | EC                        |
| Burkina Faso         | Support to National Agric. census& monitor project    | FAO, EC                   |
| Cameroon             | -   | FAO                       |
| Cape Verde           | Put into place a sustainable agric. stat. system      | -                         |
| Central African Rep. | Food security of the system                           | PAM                       |
| Chad                 | Agric. & livestock census                             | FAO, EC                   |
| Ethiopia             | -   | EC                        |
| Guinea Bissau        | -   | EC                        |
| Kenya                | Food Insecurity Assessment Report                     | FAO                       |
| Madagascar           | -   | EU-World bank             |
| Malawi               | National Agric. and Livestock Census (NACAL)          | Norwegian Embassy (NORAD) |
| Mali                 | -   | FAO                       |
| Morocco              | MEDSTAT II  | EC                        |
| Mozambique           | Support activities of depts. of Stats. &Policy        | MSU/USAID                 |
| Rwanda               | Market information system (MIS)                       | EC                        |
| Senegal              | -   | France                    |
| Sudan                | SIFSIA/GMFS   | EC                        |
| Tanzania             | Technical assistance for Agric. census implementation |                           |
| Tunisia              | -   | BIRD                      |
| Zambia               | Crop monitoring                                       | FAO, ASSP                 |

Countries expressed little possibilities or effort for training staff abroad. Only 4 countries stated that in the past 12 months a total of 11 staff have gone abroad for training on agricultural statistics courses.

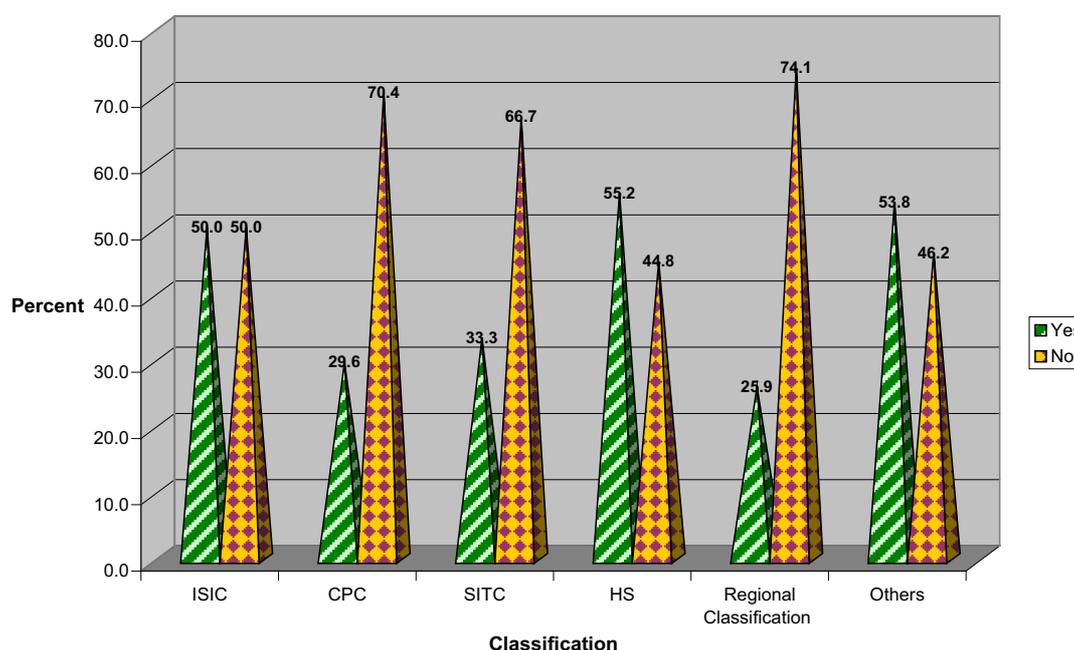

## **4.2. Outputs of the Food and Agricultural Statistical System**

### **4.2.1. Adoption of international classifications**

Data standardization facilitates information exchange, comparability, improves communication and coordination, reduces data maintenance costs, provides rich data and information, improves data analysis and allows easy access to information. In brief, this contributes significantly to improve related data quality. International classification has become necessary because different organizations, countries or individuals have different database structures and data definitions. However, these differences could affect the kinds of information that users have access to. For these reasons, countries were asked to provide information on what type of international classifications they adopted.

The Chart 4.9 displays the level of adoption of international classifications by African countries. It shows that the Harmonized System classification (HS) (55.2%) and the International Standard Industrial Classifications (ISIC) (50.0%) are the most adopted ones. However, very few countries (about 30%) use the central product classification (CPC). Moreover, only 25.9% of African countries declare using regional classifications such as SADC, AOAD, AFRISTAT, etc. (See the Table A11 in annex 1 for more details).

**Chart 4.9: Adoption of international classification - 2007**

### **4.2.2. Agricultural census and surveys**

#### **4.2.2.1. Agricultural census**

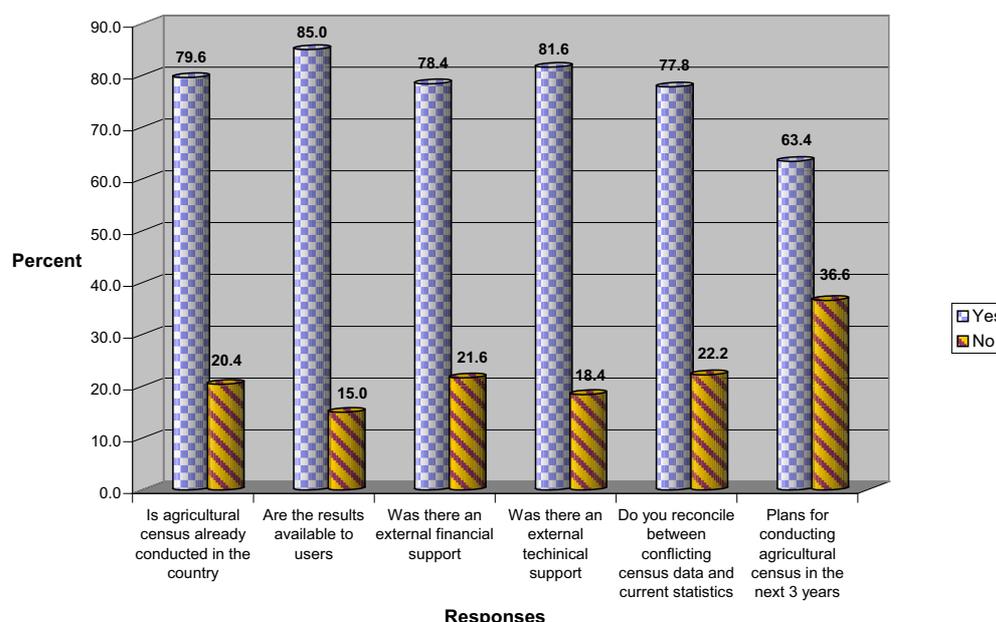

An agricultural census is defined as a large-scale and periodic statistical operation for the collection of information on the structure of the agriculture of a country. It provides aggregate totals for fundamental agricultural data for use as the benchmark for inter-censal estimates, a

frame for other agricultural sample surveys and data for small administrative units and detailed cross-classifications structural attributes. It is recommended by FAO that each country conducts agricultural census at least once in each census programme decade. In view of this, information related to agricultural census pertaining to individual countries in Africa was inquired of the respondents.

According to the Chart 4.10, majority (79.6%) of the countries in Africa have already conducted at least one agricultural census. Most of them (85.0%) have also made the results available to users.

A large proportion of those countries which conducted these censuses have external support (78.4%) in terms of finance as well as technical support (81.6%) during the agricultural census. The chart continues to indicate that conflicting census data and current statistics are reconciled by most countries (77.8%) in Africa. A relatively high proportion of countries have plans of conducting agricultural census in the next three years. (See the Table A12 in annex1 for more details).

**Chart 4.10: Status of agricultural census - 2007**

Countries have also expressed that the Agricultural statistical office is generally responsible for agriculture census (72.1% of cases). (See the below Table 4.9).

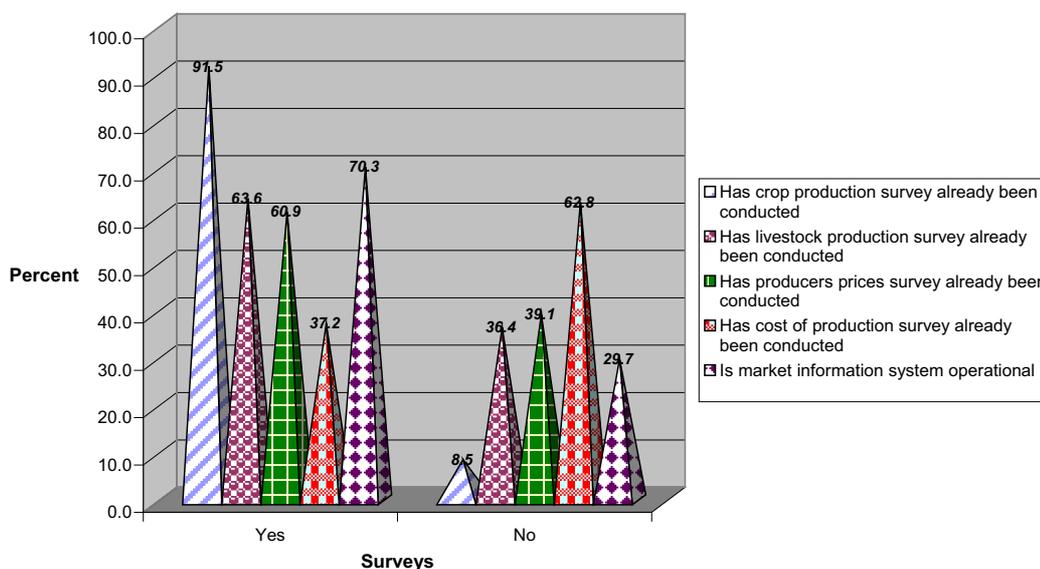

**Table 4.9: Institution responsible for agricultural census - 2007**

| Institution                     | Frequency | Percent |
|---------------------------------|-----------|---------|
| National Statistical Office     | 19        | 44.2    |
| Agricultural Statistical Office | 31        | 72.1    |
| Total                           | 43        | 100.0   |

#### 4.2.2.2. Main agricultural surveys

The Chart 4.11 shows that one crop production survey has been already conducted by almost all the countries in Africa (91.5%). A large proportion of countries (62.8%) have conducted livestock production survey. On the other hand about 60% of countries on the continent have not yet conducted surveys on cost of production. Meanwhile, almost 70% countries have their market information system operating efficiently. (See the Table A13 in annex 1 for more details).

Chart 4.11: Main agricultural surveys conducted - 2007

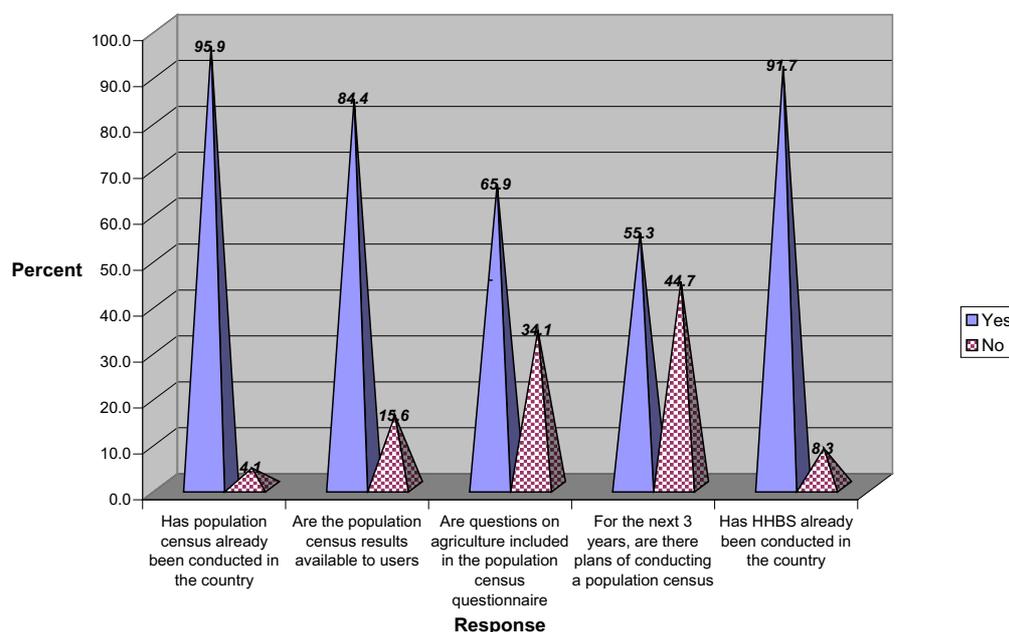

#### 4.2.3. Population census and Household budget survey

Population census and household budget survey are also very important sources of data for planning and management of a country's activities. They have a strong bearing on the development of agricultural statistics. The census data can be used as sampling frame for agricultural censuses or surveys. In this survey, countries were asked to provide information on latest population censuses and household budget surveys conducted, availability of results to users, inclusion of questions related to agriculture in population census questionnaire and when the next population census is planned to take off.

The Chart 4.12 has shown that only a few countries (4.1%) have not conducted a population census yet and household budget survey (8.3%) as at 2007. About 84.4% of the countries that responded to questionnaires have made the population census results available to their respective users. Majority of them (65.9%) have also included questions on agriculture in their population census questionnaire. Less than 60% of the countries have stated that they have plans for conducting another population census in the next 3 years. (See the Table A14 in annex 1 for more details).

**Chart 4.12: Status of the population census and HHBS - 2007**

Responses from countries have shown, according to the Table 4.10 below, that the institution responsible for population censuses is mostly the National Statistical offices (95.9%) in their respective countries.

**Table 4.10: Institution responsible for population census - 2007**

| Institution                 | Frequency | Percent |
|-----------------------------|-----------|---------|
| National Statistical Office | 47        | 95.9    |
| others                      | 3         | 6.1     |
| Total                       | 49        | 100.0   |

The Table 4.11 below has also shown that the national statistical offices are the institutions in charge of the production of household budget surveys in majority (89.1%) of the countries in Africa.

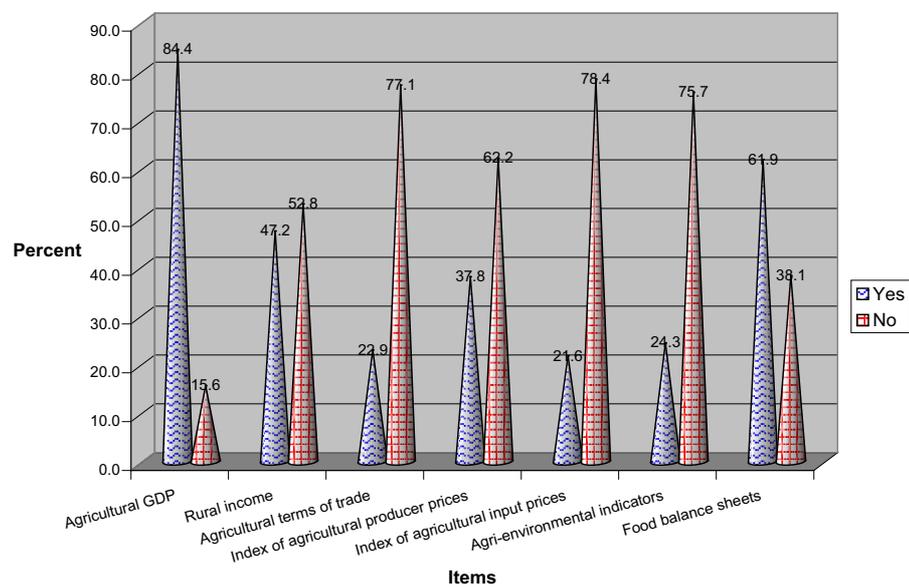

**Table 4.11: Institution responsible for HHBS - 2007**

| Institution                     | Frequency | Percent |
|---------------------------------|-----------|---------|
| National Statistical Office     | 41        | 89.1    |
| Agricultural Statistical Office | 5         | 10.9    |
| others                          | 1         | 2.2     |
| Total                           | 46        | 100.0   |

#### **4.2.4. Availability of other statistics and indicators**

Information on compilation of other statistics was also sought from countries and Chart 4.13 exhibits that agricultural GDP data is the only one, among the selected indicators, to be compiled in most countries (84.4%) on the African continent. The chart goes on to show that more than 70% of the countries that responded to the questionnaire have not compiled information about agricultural terms of trade, index of agricultural inputs prices and agri-environmental indicators. Meanwhile, over 50% countries have gathered information about food balance sheets. (See the Tables A15 and A20 in annex 1 for more details).

**Chart 4.13: Compilation of other statistics and indicators - 2007**

#### **4.2.5. National account statistics**

The 1993 System of National Accounts (SNA93) is a conceptual framework that sets the international statistical standard for the measurement of the market economy.

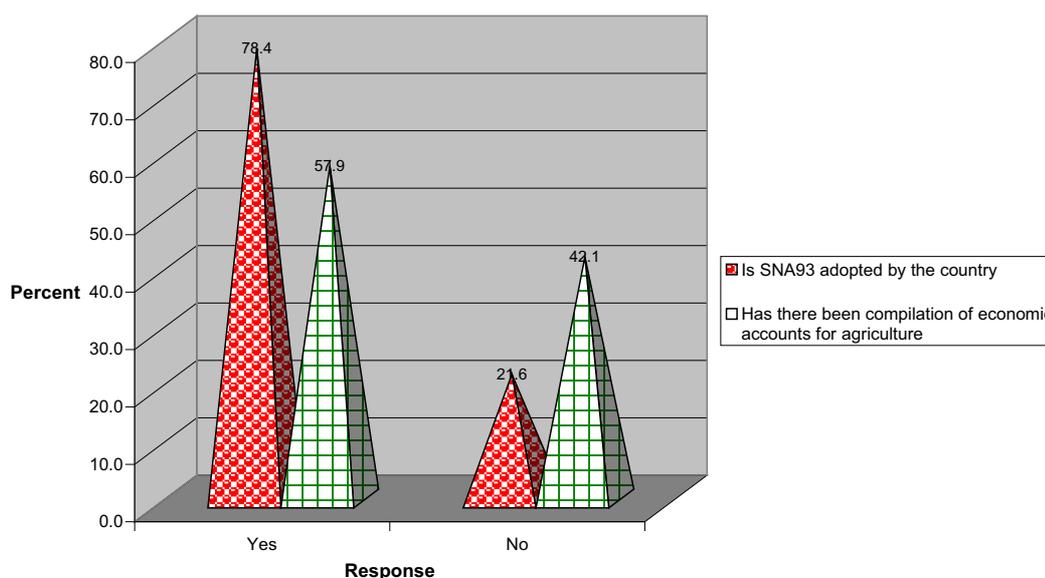

The SNA93 consists of an integrated set of macroeconomic accounts, balance sheets and tables based on internationally agreed concepts, definitions, classifications and accounting rules. These principles however provide a comprehensive accounting framework within which economic data can be compiled and presented in a format that is designed for purposes of economic analysis, decision-taking and policy-making.

The system has been the most comprehensive macroeconomic standard and it also serves as the main reference point for statistical standards of related statistics such as the balance of payments, financial and government statistics.

In this regard, questions such as its adoption in the country, the most recent year for which data are available and compilation of economic accounts for agriculture were included in the survey questionnaire.

With reference to the Chart 4.14, it has clearly shown that SNA93 had been adopted in about 80% of countries that responded to the questionnaires. Meanwhile just about 58% of countries have been compiling economic accounts for agriculture. (See the Table A16 in annex 1 for more details).

**Chart 4.14: Compilation of national account statistics - 2007**

The Table 4.12 depicts that out of 26 countries that have adopted the SNA93, 57.7% have been compiling economic account for agriculture.

**Table 4.12: Relationship between the adoption of SNA93 and the compilation of economic accounts for agriculture - 2007**

|                                 |     | Has there been compilation of economic accounts for agriculture |             |              |
|---------------------------------|-----|---|-------------|--------------|
|                                 |     | Yes   | No          | Total        |
| Is SNA93 adopted by the country | Yes | 15<br>57.7%   | 11<br>42.3% | 26<br>100.0% |
|                                 | No  | 3<br>42.9%  | 4<br>57.1%  | 7<br>100.0%  |
| Total                           |     | 18<br>54.5%   | 15<br>45.5% | 33<br>100.0% |

The Table 4.13 also shows that out of the responses given on the responsible institution for national account statistics, over 85% of the African countries indicate that their national statistical offices are the responsible agencies for such statistics.

**Table 4.13: Institution responsible for National Account Statistics -2007**

| Institution                     | Frequency | Percent |
|---------------------------------|-----------|---------|
| National Statistical office     | 38        | 86.4    |
| Agricultural Statistical Office | 2         | 4.5     |
| Others                          | 4         | 9.1     |
| Total                           | 44        | 100.0   |

#### **4.2.6. Year of the latest censuses and surveys**

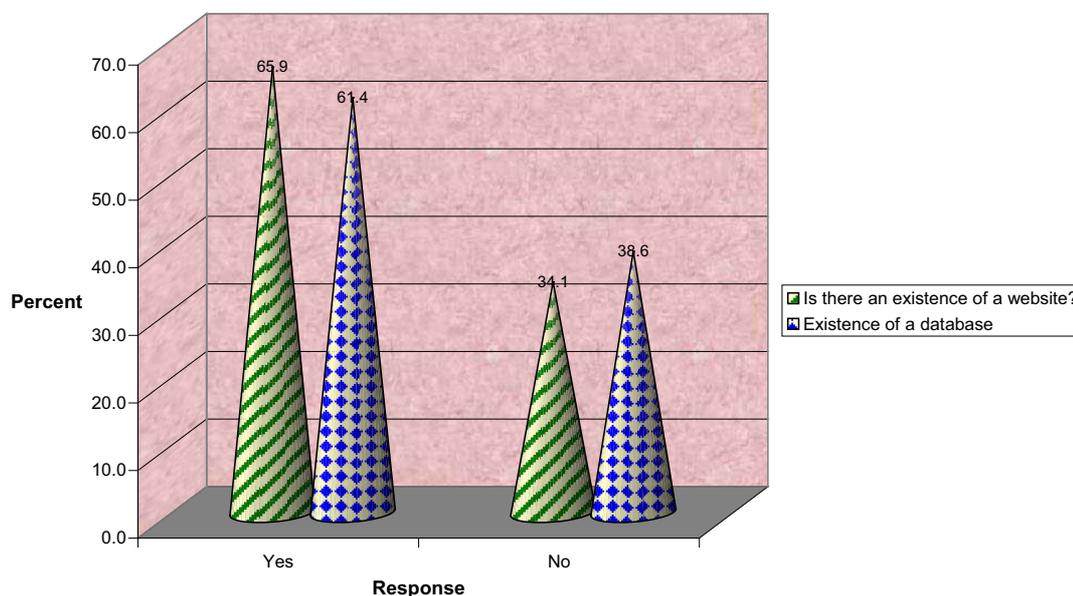

With reference to the Table A19 in annex 1, countries such as Niger, Malawi and South Africa have the most current data on agricultural census whilst Sudan has the oldest data on the agricultural census and yet there is still no plan to conduct one in the near future. Meanwhile Sudan has been able to conduct a Population census this year (2008) and have very current information on national account statistics. In the case of population census, Ethiopia, Mozambique and Swaziland have the very latest information whilst Liberia and DRC have the oldest record on population census. Considering Household budget survey, almost all countries responded to the question and Liberia followed by Sudan has the oldest records whilst Benin, Burkina Faso, Niger, Cameroon, Tanzania, Mauritius, Namibia and South Africa have the newest record. The table also shows that a lot of countries did not provide information on the year of their next population and agricultural censuses.

#### **4.2.7. Information technology**

Questions related to Information Technology (IT) were not left out in the survey. In this modern world, the level of knowledge in IT determines the extent to which quality data could be acquired. In this vein, manual works are greatly minimized thereby reducing errors in data accrued. Information such as the existence of website and database were inquired of the countries not forgetting the number of PCs owned and in use at both the headquarters and the regional or local offices.

The Chart 4.15 has clearly shown that, a little over 60% of countries that responded to the questionnaires have web site and database in existence (see the Table A17 in annex 1 for more details).

**Chart 4.15: Status of information technology - 2007**

Now the Table 4.14 goes on to show that out of those countries that have database and website, only 15% of them publish their respective database online. 85% existing databases are not therefore accessible online even if official websites do exist.

**Table 4.14: Relationship between the existence of a database, database URL and website - 2007**

| Existence of a website? |                         | database URL |       |        |
|-------------------------|-------------------------|--------------|-------|--------|
|                         |                         | Yes          | No    | Total  |
| Yes                     | Existence of a database | Yes          |       |        |
|                         |                         |              | 3     | 17     |
|                         |                         |              | 15.0% | 85.0%  |
|                         | Total                   |              | 3     | 17     |
|                         |                         |              | 15.0% | 85.0%  |
| No                      | Existence of a database | Yes          |       |        |
|                         |                         |              |       | 6      |
|                         |                         |              |       | 100.0% |
|                         | Total                   |              |       | 6      |
|                         |                         |              |       | 100.0% |

The Table 4.15 below has been a general increase in the number of computers owned and used by each country from 2005 to 2007 at both the headquarters and regional offices. In the year 2005, the average number of PCs owned and used by each country at the headquarters in Africa were very low (15 computers) but there was an increase (30) in the year 2007.

**Table 4.15: Information Technology (2005-2007)**

| Country         | Average no. of PCs owned and in use at the HQ |           | Average no. of PCs owned and in use at the regional/local offices |           |
|-----------------|---|-----------|---|-----------|
|                 | 2005  | 2007      | 2005  | 2007      |
| North Africa    | 30  | 31        | 0   | 75        |
| West Africa     | 15  | 15        | 1   | 5         |
| Central Africa  | 13  | 11        | 2   | 8         |
| East Africa     | 12  | 90        | 34  | 30        |
| Southern Africa | 12  | 22        | 3   | 10        |
| <b>Total</b>    | <b>15</b>                                     | <b>30</b> | <b>6</b>  | <b>17</b> |

East Africa recorded the highest average number (90) of PCs owned and used at the headquarters in 2007 whilst Central Africa had the lowest (11) in the same year. It has to be noted that, in 2005, North Africa did not provide any record of PCs owned and used at the regional or local offices.

#### **4.2.8. Details on the latest main national food and agricultural censuses and surveys**

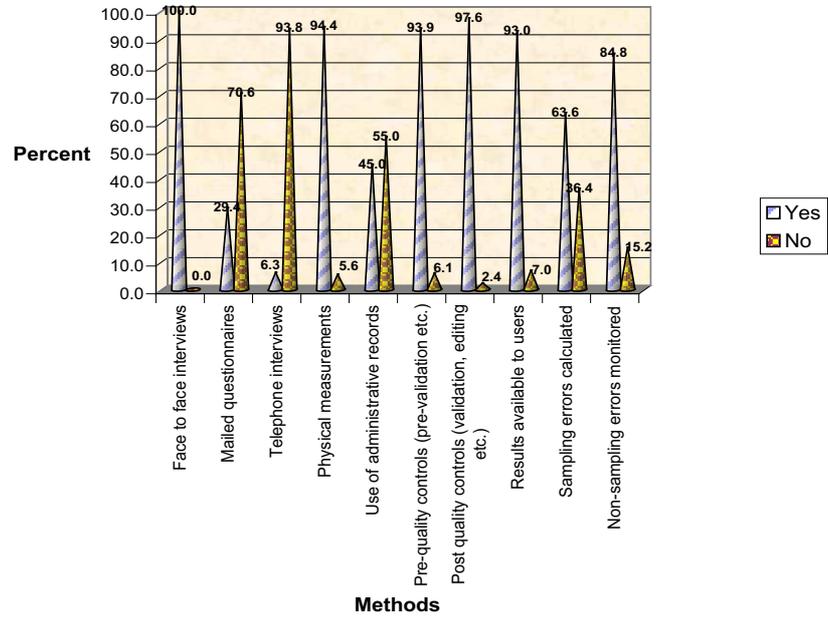

The Table A26 in annex 1 has illustrated different types of censuses and surveys conducted by individual countries in Africa. Majority of them are conducted on a regular basis.

It has also been observed, from the Chart 4.16 (see also the table A18 in annex 1 for more details), that concerning data collection methods, face to face interview is mostly used by all countries that responded to the questionnaire. The use of physical measurements is also practiced by almost all (94.4%) countries in Africa. On the other hand, the modern means of data collection such as telephone interview are not practiced (93.8%) at all by countries in Africa whilst about 7 out of 10 countries do not practice the use of mailed questionnaires in data collection.

In the case of pre-quality controls such as pre-validation and checks, it has been discovered that 9 out of 10 countries enforce this practice into their systems. In the case of data processing, post quality controls (such as validation and editing programs) are ensured by almost all countries (97.5%) on the African continent. Considering data dissemination, results are made available to users in over 90% countries.

Considering the issue of data quality, non-sampling errors were closely monitored in 8 out of 10 countries in Africa whilst sampling errors are calculated in 6 out of 10 countries.

**Chart 4.16: Data collection methods - 2007**

## CHAPTER 5

### DISCUSSIONS, CONCLUSIONS AND RECOMMENDATIONS

This chapter covers discussions on the reporting status in chapter 3 and findings in chapter 4. It also deals with conclusions and recommendations.

#### **5.1. Discussions**

The survey was conducted following the agreement made at the 17<sup>th</sup> session of AFCAS in 2001 which sought to gather relevant information on infrastructure and organization of the agricultural statistical systems in all the African countries through a standardized questionnaire.

The survey was therefore conducted with the aim of finding out the structure and output of the food and agricultural statistical systems. By so doing a time series of data would be developed. A total of 49 African countries have been cross-examined in this latest third survey cycle. As compared with the previous surveys in 2003 and 2005, the response rate in 2007 has increased tremendously. This could be attributed to the method used in data collection and approach of follow-up mounted on responding countries. This also indicates that if importance is attached and ample time is allocated to this survey, it would yield excellent and reliable results. This has truly shown a high sense of importance that countries have attached to this survey and their respective statistical systems activities. This goes on to indicate that they are obviously ready to make an impact in terms of assessing weaknesses and strengths in their respective countries thereby allowing assistance from other organizations to improve upon their system.

Based on the objective of the survey, countries organizational system has been investigated. It has been realized that 7 out of 10 countries have a legal framework for their agricultural statistical activities but very few have an active agricultural statistical advisory committee. In this case, correspondence or collaboration among statistical institutions are limited and lack integrity.

The structures of the statistical system at both the national and sub-national levels vary from one country to another. In this case, it is difficult to compare activities. The NSDS is practiced by most countries but that of NSAS is in few countries. This suggests that African countries have little or no interest or inadequate facilities to use these strategies.

Regular dialogue with data users is popular in less than 50% African countries. This brings to bear the fact that certain functions regarding dialogue between data producers and users are not in their appropriate position or don't exist in these countries.

Financial budget on agricultural statistics has been a crucial issue in Africa. Findings from the survey have illustrated that little importance is attached to the things of statistics. Some countries have expressed it clearly. Whilst some countries have the funds they are not geared towards agricultural statistics.

Human resources in terms of professional and support staff also make a significant impact on the quality of information or data accrued. It has been realized that few professionals are recruited in the fields of agricultural statistics. This could be due to the fact that such qualified personnel are not available as the profession is believed to be practiced by few people. International consultants

or experts are also very few in countries on the African continent. A small proportion too undergoes required training abroad. Some of the reasons could be inadequate funds and no incentive to encourage local staffs to do international jobs.

There are also agricultural statistical projects on-going in some selected African countries. These are excellent efforts and are under donor or partnership agencies.

Agricultural census has been conducted at least ones in about 8 out of 10 countries. There have been surveys on crop production, livestock production, producer prices and cost of production. Population census and household budget surveys have also been conducted by most countries. This suggests the rising need by countries for statistics to build their respective economies.

Information technology is also becoming more useful in agricultural statistics. At least 6 out of 10 countries have a website as well as database. This signifies the level of understanding of sharing and comparing statistical information among countries.

## **5.2. Conclusions**

Based upon the analysis of the data, the following conclusions could be drawn from the survey:

1. Most countries have legal framework for both general and agricultural statistical activities
2. Almost all countries have attached importance to the survey which has reflected in the response rate.
3. NSAS is practiced by few countries.
4. Dialogue with data users is not practiced by most countries.
5. Very few countries have been consistent in providing their financial budget for agricultural statistical activities.
6. Few professional staff is recruited.
7. Few countries have staff trained abroad in the field of agricultural statistics.
8. The use of Information technology is increasing in almost all countries.

## **5.3. Recommendations**

On the basis of the survey, the following recommendations could be made:

1. The quality of the reporting status on the metadata questionnaires could be improved by revising the strategy of data collection to suit the actual system of information network prevailing in each country.
2. In the case of legal framework for agricultural statistical activities, there is the need to create it where they don't exist and revive dormant ones.
3. Considering dialogue with data users, effective and sustainable measures such as excellent communication among data producers and users could be established to set the dialogue into motion. The concerned stakeholders need to be involved to assess the possible means of revamping the dialogue between data users and producers.
4. Where needed, more technical experts could be trained and exchange of experience and good practices between countries should be encouraged. Otherwise, staff in individual countries could be regularly given technical training internally by establishing short courses for willing staff. By this means, professionals could be efficient and always

available at their duty. This would go a long way to save time and money in the respective countries. For effective work to be done, provision of incentives to motivate the personnel should also be considered.

5. In the case of budget, countries should provide adequate financial budget to their national statistical office and the agricultural statistical offices. By this way, timely and good agricultural statistics will be produced and will serve as an excellent tool for a better monitoring and evaluation of progress made for the development of the rural and agricultural sectors.
6. Agricultural censuses could be conducted every 10 years by governments to enable having a required picture of the structure of the rural and agricultural sector. Moreover, a permanent and annual agricultural survey system could be established and strengthened.
7. Economic accounts for agriculture should be regularly and timely produced by individual governments in order to monitor for effective growth of the sector.

## ANNEX 1. SUPPLEMENTARY TABLES

**Table A1a: Frequency of country Response to AFCAS questionnaire in 2005 and 2007**

| No. of Country responses | 2005-2007 | %          |
|--------------------------|-----------|------------|
| Twice                    | 35        | 68.6       |
| Once                     | 14        | 27.5       |
| None                     | 2         | 3.9        |
| <b>Total</b>             | <b>51</b> | <b>100</b> |

**Table A1b: Response to AFCAS questionnaire by region for 2005-2007**

| Sub-regional zones  | 2005             |                            |             | 2007                       |             |
|---------------------|------------------|----------------------------|-------------|----------------------------|-------------|
|                     | No. of countries | No. of Reporting countries | %           | No. of Reporting countries | %           |
| East Africa         | 9                | 5                          | 55.6        | 8                          | 88.9        |
| North Africa        | 5                | 4                          | 80          | 4                          | 80          |
| Central Africa      | 7                | 3                          | 42.9        | 7                          | 100         |
| Southern Africa     | 14               | 11                         | 78.6        | 14                         | 100         |
| West Africa         | 16               | 12                         | 75          | 16                         | 100         |
| <b>Total Africa</b> | <b>51</b>        | <b>35</b>                  | <b>68.6</b> | <b>49</b>                  | <b>96.1</b> |

## ANNEX 2. AGRICULTURAL STATISTICAL SYSTEM COUNTRY PROFILES - 2007

**Algeria**

### Organization of the food and agricultural statistical system

|   |                     |
|---|---------------------|
| 1. Legal framework for agricultural statistical activities                      | -                   |
| 2. Active agricultural statistics advisory committee                            | Yes                 |
| 3. Institution responsible for the production of agricultural statistics        | ASO and NSO         |
| 4. Existence of National strategy for the development of statistics (NSDS)      | No                  |
| 5. NSDS operational   | N/A                 |
| 6. Existence of National strategy for agricultural statistics (NSAS)            | No                  |
| 7. NSAS operational   | N/A                 |
| 8. Existence of an official forum for dialogue between data producers and users | Yes                 |
| 9. National budget estimates for agricultural statistics activities             | US\$500 000         |

| 17. No. of support staff in the local offices                                   | 72         |
| 18. Existence of regular training program for staff                             | No         |
| 19. Annual budget for the regular training program                              | -          |
| 20. Long term experts/consultant in the past 12months                           | No         |
| 21. Technical assistance projects in the past 12months                          | Yes        |
| 22. Partner / donor for technical assistance projects in the past 12months      | FAO        |
| 23. Existence of partnership with similar institution abroad                    | No         |
| 24. No. of staff trained abroad in the past 12 months                           | -          |

## Outputs of the food and agricultural statistical system

|  |                |
|--|----------------|
| 1. Adoption of international classification                  | ISIC, SITC, HS |
| 2. Year of the latest agricultural census                    | 1992           |
| 3. Plans for conducting agricultural census in the next 3yrs | Yes            |
| 4. Year of the latest crop production survey                 | 2006/07        |
| 5. Year of the latest livestock production survey            | 2006           |
| 6. Year of the latest producer prices survey                 | 2007           |
| 7. Year of the latest population census                      | 2000           |
| 8. Year of the next population census                        | 2010           |
| 9. Institution responsible for population census             | NSO            |
| 10. Year of the latest HHBS                                  | 2006           |
| 11. Institution responsible for HHBS                         | NSO            |
| 12. Latest year for National Accounts Statistics (NAS)       | 2006           |
| 13. Institution responsible for NAS                          | NSO            |
| 14. Existence of a website                                   | Yes            |
| 15. Existence of an agricultural database                    | No             |

## Organization of the food and agricultural statistical system

|   |            |
|---|------------|
| 1. Legal framework for agricultural statistical activities                      | No         |
| 2. Active agricultural statistics advisory committee                            | No         |
| 3. Institution responsible for the production of agricultural statistics        | NSO        |
| 4. Existence of National strategy for the development of statistics (NSDS)      | No         |
| 5. NSDS operational   | -          |
| 6. Existence of National strategy for agricultural statistics (NSAS)            | No         |
| 7. NSAS operational   | -          |
| 8. Existence of an official forum for dialogue between data producers and users | Yes        |
| 9. National budget estimates for agricultural statistics activities             | -          |
| 10. Total regular budget for staff working on agric. Statistics                 | -          |
| 11. Total annual budget for non-staff working on agric. Statistics              | -          |
| 12. Total annual external funding   | -          |
| 13. Other annual resources  | -          |
| 14. No. of professional staff in the headquarters                               | 3          |
| 15. No. of professional staff in the local offices                              | -          |
| 16. No. of support staff in the headquarters                                    | 26         |
| 17. No. of support staff in the local offices                                   | 620        |
| 18. Existence of regular training program for staff                             | Yes        |
| 19. Annual budget for the regular training program                              | US\$24 444 |
| 20. Long term experts/consultant in the past 12months                           | No         |
| 21. Technical assistance projects in the past 12months                          | No         |
| 22. Partner / donor for technical assistance projects in the past 12months      | -          |
| 23. Existence of partnership with similar institution abroad                    | No         |
| 24. No. of staff trained abroad in the past 12 months                           | -          |
